SINGLE OUTCOME AGREEMENT FOR DUNDEE 2013-2017
OUR VISION FOR DUNDEE

Through Our Partnership, Dundee:

◊ will have a strong and sustainable city economy that will provide jobs for the people of Dundee, retain more graduates and make the city a magnet for new talent

◊ will offer real choice and opportunity in a city that has tackled the root causes of social and economic exclusion, creating a community which is healthy, safe, confident, educated and empowered;

◊ will be a vibrant and attractive city with an excellent quality of life where people choose to live, learn, work and visit;

This is the Dundee Partnership's Single Outcome Agreement for 2013-2017 and it can only be delivered in partnership. It demands that each of us plays our part to the full, but crucially, that we share the commitment to work together to achieve the change we need in Dundee.

Statutory Partners:

Dundee City Council

Scottish Government

NHS Tayside

Police Scotland

Scottish Fire and Rescue Service

Skills Development Scotland

Scottish Enterprise

TACTRAN

Supporting Partners:

Dundee Third Sector Interface

Chamber of Commerce

Dundee College

University of Dundee

University of Abertay

Tayside Community Justice Authority

Job Centre Plus

4. **Dundee Outcomes**

- **Dundee Outcome 1**
  Dundee will be an internationally recognised city at the heart of a vibrant region with more and better employment opportunities for our people.

- **Dundee Outcome 2**
  Our people will be better educated and skilled within a city renowned for learning and culture.

- **Dundee Outcome 3**
  Our children will be safe, healthy, achieving, nurtured, active, respected, responsible and included.

- **Dundee Outcome 4**
  People in Dundee will have improved physical health and mental well-being and will experience fewer health inequalities.

- **Dundee Outcome 5**
  People in Dundee are able to live independently and access support when they need it.

- **Dundee Outcome 6**
  Our communities will be safe and feel safe.

- **Dundee Outcome 7**
  Dundee will be a fair and socially inclusive city.

- **Dundee Outcome 8**
  Our people will live in strong, popular and attractive communities.

- **Dundee Outcome 9**
  Our communities will have a high quality and accessible local services and facilities.

- **Dundee Outcome 10**
  Our people will live in a low carbon, sustainable city.

**APPENDIX 1:** Ward Level Analysis of SIMD 2012

**APPENDIX 2:** Dundee Outcomes and relationship to National Performance Framework & Policy Priorities
Section One - Introduction

1.1 INTRODUCTION

This is the second Single Outcome Agreement for Dundee produced by the Dundee Partnership which is the vehicle for community planning in the city.

The Dundee Partnership brings together the public, voluntary, academic and private sectors to work alongside communities to improve all aspects of life in Dundee.

The Single Outcome Agreement for Dundee 2013-17 represents the shared aspirations of the Dundee Partnership for the next four years. It builds on a firm foundation created by the strength of our partnership-working over many years and promises renewed effort to achieve better outcomes for people who live in and come to the city.

1.2 OUR VISION

The Partnership's vision for Dundee remains as relevant today as it was when it framed the first community plan in 2011. With its focus on jobs and the economy, social inclusion and quality of life, it captures the broad agenda the Partnership must address if it is to enable all aspects of the life of the city to flourish.

The Partnership acknowledges that, over the last ten years, the economic prospects of Dundee have improved dramatically. Indeed it now stands on the cusp of a scale of economic regeneration which occurs once in a generation or longer. The potential impact of securing offshore renewables manufacturing and the V&A at Dundee can be genuinely transformational and these will build on the city’s strengths in Life Sciences, Digital Media and Creative Industries.

At the same time, however, the levels of poverty, deprivation, substance misuse in the city persist. Over the next four years our challenge will be to achieve greater fairness in the city by ensuring people from our community regeneration areas are able to benefit from developments in Dundee and support people even as they experience the impact of welfare reform, the difficult economic climate and ongoing inequalities.

1.3 STRATEGIC PRIORITIES

This single outcome agreement is built upon a series of the Dundee Outcomes which are adapted from, and deliver upon, the National Performance Framework for Scotland. The Partnership welcomes the National Community Planning Group’s recent identification of key priorities “…where the aim should be to achieve transformational, not incremental, performance improvement,” which are:

- Economic recovery and growth;
- Employment;
- Early years;
- Safe and stronger communities, and reducing offending;
- Health inequalities and physical activity; and
- Outcomes for older people
There is a strong and direct relationship between these priorities and the Dundee Outcomes which were shaped to merge national and local priorities and thereby ensure that in meeting the needs of Dundee and its people, the Partnership is making a significant contribution to the economic and social success of Scotland.

1. Dundee will be an internationally recognised city at the heart of a vibrant region with more and better employment opportunities for our people.

2. Our people will be better educated and skilled within a city renowned for learning and culture.

3. Our children will be safe, healthy, achieving, nurtured, active, respected responsible and included.

4. People in Dundee will have improved physical health and mental well-being and will experience fewer health inequalities.

5. People in Dundee are able to live independently and access support when they need it.

6. Our communities will be safe and feel safe.

7. Dundee will be a fair and socially inclusive city.

8. Our people will live in strong, popular and attractive communities.

9. Our communities will have a high quality and accessible local services and facilities.

10. Our people will live in a low carbon, sustainable city.

Figure 1 on page 6 shows how the Partnership translates the national outcomes to local ones and clearly delegates the lead responsibility for delivering progress while acknowledging the cross-cutting nature of all outcomes. (The matrix in Appendix 2 goes further and presents the relationship between the long and short term Dundee Outcomes and the Scottish Government’s National Performance Framework and the new policy priorities set out in the SOA guidance for Community Planning Partnerships. The matrix is unavoidably detailed as it reflects the reality of the multi-dimensional nature of the outcome-based approach.)

In the same way that the National Planning Group identified key priorities within the broad National Performance Framework, the Dundee Partnership has agreed the top strategic deliverables which can achieve the step change in outcomes to which we aspire in relation to the fundamental requirements to create successful families and communities - rewarding employment; a safe and nurturing childhood, supportive and inclusive communities and positive health.
Fig 1: Single Outcome Agreement and Relationship to Dundee Partnership

**National Outcomes**
- We live in a Scotland that is the most attractive place for doing business in Europe.
- We realise our full economic potential with more and better employment opportunities for our people.
- We are better educated, more skilled and more successful, renowned for our research and innovation.
- Our young people are successful learners, confident individuals, effective contributors and responsible citizens.
- Our children have the best start in life and are ready to succeed.
- We live longer, healthier lives.
- We have tackled the significant inequalities in Scottish society.
- We have improved the life chances for children, young people and families at risk.
- Our people are able to maintain their independence as they get older and are able to access appropriate support when they need it.
- We live our lives safe from crime, disorder and danger.
- We live in well-designed, sustainable places where we are able to access the amenities and services we need.
- We have strong, resilient and supportive communities where people take responsibility for their own actions and how they affect others.
- We value and enjoy our built and natural environment and protect it and enhance it for future generations.
- We take pride in a strong, fair and inclusive national identity.
- We reduce the local and global environmental impact of our consumption and production.
- Our public services are high quality, continually improving, efficient and responsive to local people's needs.

**Dundee Outcomes**
1. Dundee will be an internationally recognised city at the heart of a vibrant region with more and better employment opportunities for our people.
2. Our people will be better educated and skilled within a city renowned for learning and culture.
3. Our children will be safe, healthy, achieving, nurtured, active, respected, responsible and included.
4. People in Dundee will have improved physical and mental well-being and will experience fewer inequalities.
5. People in Dundee will be able to live independently and access support when they need it.
6. Our communities will be safe and feel safe.
7. Dundee will be a fair and socially inclusive city.
8. Our People will live in strong, popular and attractive communities.
9. Our communities will have high quality and accessible local services and facilities.
10. Our people will live in a low carbon, sustainable city.

**Strategic Themes**
- Work and Enterprise
- Learning and Culture
- Children and Young People
- Health and Wellbeing
- Reshaping Care
- Alcohol and Drug Partnership
- Building Stronger Communities
- Dundee Environment

**Cross-Cutting Themes**
- Community Involvement
- Equality & Diversity
- Social Enterprise
- Monitoring & Evaluation

**Dundee Partnership**

**Core Delivery Partners**
- Local Community Planning Partnerships
- Skills Development Scotland
- Job Centre Plus
- Scottish Fire & Rescue Service
- NHS Tayside
- Dundee City Council
- Police Service Scotland
- Community Justice Authority
- Dundee Third Sector Interface
- Scottish Enterprise
- University of Dundee
- University of Abertay
- Dundee College
- Chamber of Commerce
- TACTTRAN
- Leisure & Culture

Dundee Partnership Forum
Dundee Partnership Co-ordinating Group
Dundee Partnership Management Group
In preparing the SOA, the Dundee Partnership Forum re-affirmed its support for the following as the top strategic deliverables for Dundee.

**Jobs and Employability**
- Transforming Dundee Waterfront
- Creating V&A at Dundee
- Securing Renewables Industries

**Children and Young People**
- Raising School Attainment
- Improving Child Protection
- Focusing on Early Years

**Social Inequalities**
- Increasing household incomes
- Reducing Child Poverty
- Increasing access to benefit/debt advice

**Physical and Mental Wellbeing**
- Reducing harm from substance misuse
- Introducing city-wide Social Prescribing
- Rolling Out Equally Well approach to Mental Wellbeing

Again, there is a clear relationship between these and the six new policy priorities. While these do not address older people and communities specifically, the overlap with issues including poverty, substance misuse and mental wellbeing will undoubtedly influence the quality of life of all people and neighbourhoods across the city. Our particular efforts to support older people and communities are addressed in Dundee Outcomes 5 and 6-9 respectively and they will also be the focus for additional attention in the development and implementation of our Prevention Plan (See 1.7)

### 1.4 GOVERNANCE AND DELIVERING BETTER OUTCOMES

The Dundee Partnership has implemented community planning in the city for over ten years and has an even longer record of joint-working to achieve economic development and regeneration. Our community planning arrangements have evolved in line with changing national expectations and continue to capture the lessons of local experience.

Dundee's Community Plan consists of two documents:

- the **Single Outcome Agreement** sets out our top strategies, priorities and outcomes for the city to be driven by all community planning partners. The ten strategic outcomes for the city define our **10 year aspirations for change.** Our intermediate outcomes and performance indicators set our **four year improvement targets**

- the **Dundee SOA Delivery Plan** describes the actions which will be taken by partners collectively (and where relevant, individually) to achieve real progress towards the 'above the waterline' outcomes over the next four years

Both documents contain indicators with which we will measure progress. These are monitored and reported to the Partnership regularly and will form the basis for the **SOA Annual Report which will evidence short term progress and achievement.**

This is our new Single Outcome Agreement for 2013 to 2017 and the detailed Delivery Plan will be approved by the Dundee Partnership Management Group in September 2013.

Figure 2 on page 8 shows the relationship between the SOA and the Delivery Plan as well as the connections to individual partners’ corporate plans and Council Departmental service plans which complete the ‘golden thread’ from strategic priority to operational activity.
1.5 DEVELOPING IN PARTNERSHIP

This is the first Single Outcome Agreement for Dundee since the publication of the Christie Commission’s recommendations, the Scottish Government’s priorities for reform in its response Reviewing Scotland’s Public Services and the national review of community planning in Scotland.

The Dundee Partnership wholeheartedly supports the ambition set out by the national community planning group in the guidance on Single Outcome Agreements and the “four pillars” of public sector reform. We believe that this SOA will provide evidence of:

- a decisive shift towards prevention;
- greater integration at a local level driven by better partnership, collaboration and effective local delivery;
- greater investment in the people who deliver services through enhanced workforce development and effective leadership; and
- a sharp focus on improving performance, through greater transparency, innovation and use of digital technology.

As a Partnership we anticipate placing even greater emphasis on collective governance and performance management and look forward to working with the Accounts Commission when it begins to implement forthcoming new arrangements for community planning partnerships.

As partnership working in Dundee continues to evolve, the contributions of Police Scotland and the Scottish Fire and Rescue Service remain vital and significant. Through the transitions towards single fire and police services, we are confident that the flexibility to adapt to local partnerships will allow joint-working to become deeper and stronger.

To date the Partnership has used a Fit for Purpose review model based on the Public Sector Improvement Framework to determine how it can improve its organisational capacity and
performance. We will examine the Improvement Service’s evaluation report on self-assessment in Community Planning Partnerships with a view to deciding whether an Outcomes Focussed Partnership Checklist can offer a better vehicle for developing continuous improvement plans over the lifetime of this SOA.

1.6 PERFORMANCE MANAGEMENT

Performance of the SOA is closely monitored to make sure that the strategies being pursued are making an impact.

All of the indicators and actions in both the SOA and the SOA Delivery Plan are stored in Online Plan and Online Performance Monitoring databases. These work by sending regular automated emails to those listed as lead officers for each indicator and action, asking them to provide updates which are available online and used to produce reports:

- in the case of indicators, officers post the latest available data, with comments and a note of any remedial action planned if performance has deteriorated. The performance database highlights trends using colour-coded symbols to show which indicators are improving, deteriorating or being maintained, and also stores baseline and target information.

- in the case of actions, officers provide concise written updates on progress and give assessments of whether the actions are completed, ahead of schedule, on schedule, behind schedule, unlikely to be achieved or abandoned, with reference to the target dates in the plan.

The information provided in both databases forms the basis of a mid-year progress report and an annual report to the Dundee Partnership Management Group.

Reports can also be generated by outcome or intermediate outcome, for monitoring by the relevant Strategic Theme groups. These provide a useful resource for the reports highlighting progress on each theme in turn, which are a standing item on the agenda of the Dundee Partnership Management Group.

Our SOA annual reports will measure progress towards our long-term outcomes by updating and assessing our outcome indicators. We will aim to represent the trend within the SOA period to allow for a better sense of performance against targets. Where data is available before the SOA 2013-17 period, this will also be represented. Where available, additional data from the Partnership's 'below the waterline' intermediate outcome or output indicators will be presented to provide a fuller picture and enable conclusions to be drawn. Benchmarking against comparable Scottish Local Authorities will be carried out and presented for all national indicators where available.

1.7 A PREVENTION PLAN FOR DUNDEE

The Partnership’s approach to prevention will address Place; Strategic Prevention Priorities; accelerating Prevention within Outcomes; and Joining Up leadership, management and practice across partners.

Place

The Partnership has clearly signalled its intention to close the gap between those communities in Dundee with high and low levels of poverty and deprivation, and between Dundee and the rest of Scotland. Detailed mapping of the areas of Dundee within the Scottish Index of Multiple Deprivation 2012 using the methodology demonstrated in the Improvement Service’s ‘Making Better Places, Making Places Better’ confirms that datazones in the worst 15% do indeed ‘cluster’ geographically and by experiencing most or all deprivation factors.
The partners will therefore target additional services and resources to deprived communities based on a deeper understanding of the needs of communities (together with the potential offered through community assets) and the activities which will arrest decline and achieve improved outcomes. This approach is exemplified in the Lochee Early Years Pathfinder Project (see page 61).

**Strategic Prevention Priorities**

Building on the learning from the Change Funds, we will prioritise prevention activity in relation to Early Years and Older People.

The work of the newly formed Early Years Collaborative, combined with the actions emerging from the Lochee Pathfinder will identify evidence based and replicable preventative activities which can be applied across the city. The EY Collaborative will be challenged to ensure that prevention is at the root of all its tests of change and recommendations for improved services which Get It Right for Every Child.

Thanks to the experience gained through the financial analysis undertaken as part of the Integrated Resource Framework, the Health and Social Care arrangements have a solid understanding of the costs and impacts of services and the wider action in communities (e.g. community learning, transport, physical activity) which is required to prevent negative outcomes for older people and enable them to maintain independent and healthy lives. Further developments will emphasise prevention and early intervention as a means of improving the efficiency and targeting of services and quality of life outcomes for clients.

Our commitment to tackling poverty and deprivation through our Fairness Strategy and Action Plan will see further Strategic Prevention Priority relating to Families in Poverty. This will respond to the complex needs of adults and children in our city and address all of the Fairness outcomes relating to financial inclusion, social inclusion, learning and employability, health and communities. We will emphasise the importance of community spirit and wellbeing in neighbourhoods and pick up on the success of the Stobswellbeing test site.

**Prevention Across Outcomes**

A shift to prevention is desirable and can be achieved across all strategic outcomes in the SOA. Many of these will be cross-cutting and relate to multiple outcomes and connecting these and creating mutually reinforcing activities will be crucial.

In line with the SOA national guidance, all of the Partnership’s theme groups will:

- define and identify the key preventative activities already in place relating to their outcome;
- identify local best practice and ‘best buys’ that should be replicated more widely;
- measure the scale of preventative activity, the resources committed to this and the impact it has; and
- develop opportunities to roll out and upscale existing activity and/or identify new approaches.
Joining Up Leadership, Management and Practice

The Partnership is developing many of the joint planning and commissioning processes which will be necessary to underpin effective prevention. Primary among these are the processes connected to the Change Funds.

The Partnership is also committed to a number of improvement programmes in Dundee including the Early Years Collaborative and The Total Place Lochee Pathfinder, both of which are examining the potential for incremental and, where possible, radical service and outcome improvement.

In support of our efforts to understand our population and the scale, distribution and impact of deprivation, NHS and Council colleagues are working together on the profiling and analysis of needs and assets across the city. The addition of further analysis from partners at Dundee University offers potential to identify hitherto untested solutions to local challenges.

To shape our overall approach to prevention across the Partnership, it is proposed that a balanced scorecard approach be adopted which considers outcomes, services, capacity/improvement and resources. This will be used to agree a few top priorities for action and for tracking progress towards enhanced prevention across the period of the SOA. This aspect of the SOA will be regularly monitored by the Dundee Partnership Management Group.

1.8 STRUCTURE OF THE SINGLE OUTCOME AGREEMENT FOR DUNDEE 2013-2017

After this introduction, the following sections set out the shape of the city and the major cross-cutting issues we will address before describing in detail each of the Dundee Outcomes.

Section 2 presents the Integrated City Profile / Strategic Assessment with the high level statistics informing the overall strategic considerations for Dundee. This has been reconfigured to address the six policy priorities set out in the SOA guidance for Community Planning Partnerships.

Section 3 outlines five of the Cross-cutting Priorities for the city which augment the efforts of the Partnership to meet our strategic outcomes. These are community engagement, fairness and tackling poverty, mental wellbeing and the Equally Well test site, the Alcohol and Drug Partnership and tackling substance misuse, and our commitment to Equality and Diversity.

Section 4 outlines the ten Dundee Outcomes in detail by presenting:

- the strategic context for each outcome including the Dundee and Scottish policy environment, the local evidence base and outstanding issues to be addressed;

- outcomes and intermediate indicators which set out the short term contributory factors which will have to be achieved if our long term ambitions are to be realised;

- indicators and targets which include all nationally endorsed indicators from the Improvement Service unless local alternatives are available which offer a further layer of detail. Indicators reflect a set of quality criteria discussed and agreed with colleagues within the Scottish Government's office of the Chief Statistician and Performance. Similarly, the modestly ambitious targets were developed following discussion with Scottish Government on the appropriate techniques to be applied in setting our four year targets; and

- our plan for improving our Partnership and Performance. These reflect the national community planning improvement priorities by covering measures to integrate services, focus on prevention and reduce inequalities.
(Full information on each SOA indicator is available on the Dundee Partnership website including the source; a link to obtain a copy of the data; a description of the data; rationale for using the indicator as well as any further comments).

In support of our commitment to reduce inequalities, baselines and targets are given for community regeneration areas where relevant. Wherever possible, performance of the community regeneration areas will be compared to the rest of Dundee to produce a range of 'closing the gap' indicators and if these are not available at present, every effort will be made to secure the data and present the results in future SOA annual reports.
Section 2 - Integrated City Profile

2.1 POPULATION

- Dundee City is Scotland's fourth largest city and currently has a population of 147,000 (2010 Census*).

- The City covers 6,300 hectares and is geographically the smallest local authority area in Scotland. Despite its small size it plays a crucial role as a regional centre for the wider area of Perth and Kinross, Angus and North East Fife and has a catchment population of approximately 400,000 persons.

*Full population data from the 2010 Census is not yet available, once this is released in spring/summer 2013 we shall update the profile accordingly. The following information is based on the most recent 2010 based population estimates and projections.

Fig 3: Dundee Catchment Area

Population Change

- Following a long and sustained period of population decline since the early 1990's, Dundee City has in recent years seen its population stabilise and indeed, show a slight increase.

Fig 4: Dundee's Population Change 1991 - 2010
• 16 to 29 year olds age group account for the largest group of in-migrants to Dundee City.

Fig 5: Migration

Dundee currently has a 2.8% share of Scotland's population.

Whilst Dundee has a slightly higher than average proportion of elderly residents it also has the highest proportion of student population in Scotland, approximately 20% of the population are students.

Fig 6: Dundee’s Share of Scotland’s Population, by Year of Age

Source: NRS 2010 Mid Year Estimates

• Latest projected population figures predict that the population will remain stable with an expected increase of 6.5% by 2035.

2.2 ECONOMIC RECOVERY AND GROWTH

Current Economic Situation

- Regional centre providing employment opportunities for residents and to in-commuters from surrounding local authority areas. 72,100 employee jobs in 2011;
- Diverse economic base with particular strengths in knowledge intensive industries;
- £1 Billion Waterfront Regeneration Project forecast to generate 9000 jobs for the city’s economy;
- V&A Dundee to open during the lifespan of the SOA providing a magnet for business and tourism growth;
- Identified in Scotland’s National Renewables Infrastructure Plan as a prime location for offshore renewables manufacturing and service activity;
- Still highly dependent on a large public sector;
- Claimant unemployment rate that exceeds the Scottish average and is amongst the 5 Scottish local authorities with the highest claimant rates;
- Average workplace and residents earnings that fall below the Scottish average.

Trends

- Employee job numbers in Dundee fell by 4.8% between 2008 and 2011. The reduction in job numbers was less pronounced than for Scotland as a whole where job numbers fell by 5.3%;
- The percentage share of knowledge intensive jobs rose between 2008 and 2011 compared to a drop in the Scottish share. 49.4% were knowledge intensive in Dundee in 2011 compared to a Scottish average of 40.9%;
- The share of public sector jobs in both Dundee and Scotland rose between 2008 and 2011. In 2011, 33.6% of employee jobs were in the public sector in Dundee compared to 26.4% across Scotland;
- The claimant unemployment rate rose from 3.8% in 2007 to 5.9% in 2012. The Scottish average also rose sharply over this period but remained significantly lower than in Dundee;
- Workplace earnings rose by only 3.9% between 2008 and 2012 compared to a rise of 7.6% across Scotland. Workplace earnings in Dundee trailed the Scottish average by 2.9% in 2012;
- Residents earnings fell by 1.7% compared to a rise of 7.6% across Scotland. Resident’s earnings in Dundee trailed the Scottish average by 13.3% in 2012.

2.3 OUTCOMES FOR OLDER PEOPLE

We know that an ageing population and the effects of deprivation combine to increase the demands on health and social care services. People are living longer with increased ill-health and frailty and people in areas of multiple deprivation are likely to experience the long term conditions associated with ageing at an earlier stage

- Dundee has an ageing population – the number of people aged over 65 expected to increase by 30%;
- The number of people aged over 75 is predicted to increase by 40%;
- Those over 85 are predicted to increase by 93%;
- In Dundee there are 3,417 people with a diagnosis of dementia. This equates to 0.7 per 100 people registered with a G.P. in Dundee;
- The number of home care clients aged 85 or over has increased by a third in the last five years;
- For the over 65s needing care Dundee is almost meeting the target of 30% of delivered at home.

Fig 7: Dundee’s Projected Ageing Population

Source: NRS 2010 Based Population Projections

- Also predicted in the 2010-based household projections is a 33% increase in households with a head of household aged 75 or more. The 60-74 age group is expected to remain the same.
Table 7: Projected number of households by age group, Dundee City

Source: Scottish Government 2010 Based Household Projections

The ageing population and high prevalence of long term conditions means that people will be increasingly dependent on community health, care, support and assistive technology services to assist them to stay in their own homes for longer.

- The number of home care clients aged 85 or over has increased by a third in the last five years.

Fig 8: Home care client age groups, Dundee City 2012

- Occupancy rate in residential care homes has dropped which is positive in the drive to shift the balance of care to care at home.

Fig 9: Trend in occupancy rates in care homes 2005-2012
There are more people with larger packages of home care than before and this can be measured by looking at those receiving 10+ hours of intensive homecare. Since 2003 this figure has almost doubled from 16.5% in 2003 to 30.7% in 2012.

Fig 10: Percentage aged 65 plus receiving 10+ hrs of home care in Dundee City

Hospital Care

- The number of people aged 65+ with multiple emergency admissions to hospital, as well as the rate of multiple emergency admissions per 100,000 of the population, has increased;

- Occupied hospital bed days for older people aged 75 and over have increased, due to the needs of those who have been admitted who have had multiple co-morbidities contributing to their length of stay in hospital;

- The number of very dependent older people who have a need for intensive packages of care has increased;

- In 2011/12 there were 47 emergency admissions into care homes from the community, with an increase in those with dementia being admitted as a result of carers’ stress.
2.4 POVERTY

Scottish Index of Multiple Deprivation

- 42,125 (29.3%) of Dundee’s population live in one of the 15% most deprived areas of Scotland.

Fig 11: Levels of deprivation in Dundee City in SIMD 2012

- 55 (5.6%) of the 976 datazones in the 15% most deprived datazones in Scotland were found in Dundee City, compared to 54 (5.5%) in 2009, 53 (5.4%) in 2006 and 51 (5.2%) in 2004.

- The level of income deprivation in Dundee City is greater than that in Scotland as a whole. In the SIMD 2012 income domain, 25,690 people (17.8%) were income deprived. This compares to 13.4% across Scotland as a whole.

- The level of employment deprivation in Dundee City is greater than that in Scotland as a whole. In the SIMD 2012 employment domain, 15,465 people aged 16 to 60/64 (17%) were employment deprived. This compares to 12.8% across Scotland as a whole.

- In the health domain in SIMD 2012, 35 (19.6%) of Dundee City’s 179 datazones were found in the 15% most deprived datazones in Scotland, compared to 38 (21.2%) in 2009, 43 (24%) in 2006 and 54 (30.2%) in 2004.

- In the education domain in SIMD 2012, 48 (26.8%) of Dundee City’s 179 datazones were found in the 15% most deprived datazones in Scotland, compared to 53 (29.6%) in 2009, 55 (30.7%) in 2006 and 48 (26.8%) in 2004.

- In the housing domain in SIMD 2012, 67 (37.4%) of Dundee City’s 179 datazones were found in the 15% most deprived datazones in Scotland.
• In the access domain in SIMD 2012, 1 (0.6%) of Dundee City’s 179 datazones were found in the 15% most deprived datazones in Scotland, compared to 0 (0%) in 2009, 6 (3.4%) in 2006 and 7 (3.9%) in 2004.

• In the crime domain in SIMD 2012, 40 (22.3%) of Dundee City’s 179 datazones were found in the 15% most deprived datazones in Scotland, compared to 30 (16.8%) in 2009 and 32 (17.9%) in 2006.

• 8,869 children (37%) live in one of the 15% most deprived data zones. This is an increase on nearly 2% from the 2010 SIMD.

Healthy Weight

- The number of P1 children within a healthy weight range is falling short of target in Dundee. 5.9% above 98th quartile on in March 2012, same as last year and up from 5.2% in 2010;

- The number of primary schools meeting 2 hours physical education targets per week increased last year.

Child Protection

- The number of child protection registrations in Dundee fluctuates with peaks around 100 in summer 2009 and summer 2011. Most recent figures are lower at around 70.
Looked after children

- The number of looked after children in Dundee as at 31 March 2012 was 727 compared to 715 at the same point in the previous year;

- The number of children in residential accommodation continues to be small, 6-7% of the total number of accommodated children, which is well below the Scottish average.

Table 12: Number of Looked After Children at 31 March 2012

Exclusions

Record of school exclusions incidents in 2011/2012 show 800 Pupils with at least one incident of exclusion at primary and secondary schools:

- 173 at Primary School level;
- 627 at Secondary School level;
- 3 Pupils with more than 10 incidents of exclusion
- 68 Pupils with between 5 and 9 Incidents of exclusion
- 729 Pupils with between 1 and 5 Incidents

Children and Young People

- Dundee has approximately 23,000 young people aged 0-15, they account for 17% of the total population;

- Over the next 25 years Dundee is expected see an increase of 15% in this age group from 23,000 to 27,400 persons.

Fig 13: Projected Change in 0-15 Population

Source: NRS 2010 Based Population Projections
School Pupils

- There were 17,362 pupils in publicly funded primary, secondary and special schools in Dundee (Pupil Census September 2012). This figure has increased slightly this year; it had been decreasing in recent years.

Attainment

Attainment levels continue to improve in Dundee Schools however citywide attainment remains below National levels in most measures.

- Performance in S4 has increased across all measures, with the exception of 5+ awards at level 5, which decreased by 1%. English & Maths at level 3 remains in line with the national figure for the second year;

- Similarly, all S5 measures increased, with the exception of 5+ awards at level 6, this remained constant;

- At the end of S6, 1+ awards at level 6 increased by 1%, with the other measures remaining constant. Again, 15% of the cohort attained at Advanced Higher level which is only 1% below the Scottish figure.

#### 2.6 HEALTH INEQUALITIES

**Health and Wellbeing**

The 2012 Dundee Citizens Annual Survey outlined that:

- 77% of respondents rate their health good or very good
- 98% of respondents registered with a GP, 90% with a dentist
- There was a reduction in number of people who smoke from 32% in 2010 to 22% in 2012
- 34% of respondents said they drink (8 for men/6 for women) or more weekly

Information based on the registers of general practices in Dundee 2011/2012 as per the quality and outcomes framework indicates the prevalence of health conditions in Dundee compared to the rest of Scotland. It can be seen below that in most cases the rate in Dundee is higher than the rate for Scotland.

Mental wellbeing

- Data from the 2012 Dundee City Council Citizens’ Survey showed that Dundee scored higher on the Warwick-Edinburgh Mental Well-being Scale (WEMWBS) than the Scottish average (52.16 vs. 49.9). However, scores varied across communities and were somewhat lower in Community Regeneration Areas.

Drug use

- It is estimated that there are 59,600 problem drug users in Scotland as a whole, with 8.4% of these being in Tayside;
- In 2009/10, within Tayside, Dundee City had the highest rate of the three council areas and the prevalence was also higher than the overall Scotland rate.

Alcohol Related Deaths

- The figure below shows the history of mortality in Dundee City where alcohol was the underlying cause of death and shows, despite some fluctuations, an increase over time.
Learning Disabilities

- As the entire population lives longer, so does the population of people with a learning disability. This group of people and their carers will need more services and support as they will also experience the long term conditions and co-morbidities associated with old age;
- 2010 - 999 adults aged 16+, 2011 – 1114 adults aged 16+.

Carers

Respite Care is a service intended to benefit a carer and the person he or she cares for by providing a short break from caring tasks.

- There was a considerable increase in respite weeks provided by Dundee City between 2006/07 and 2010/11, provision in Dundee almost doubled during this period, with an increase of 3,080 weeks to 8,000 weeks. In 2011/12 the number of respite weeks decreased slightly from the previous year to 7,670 weeks in total for Dundee City.

3. All other Scottish local authorities can be found in Annex 1 for comparison purposes.

2.7 SAFER AND STRONGER COMMUNITIES, AND REDUCING OFFENDING

The 2012 Dundee Citizens Annual Survey outlined that:

- 98% of respondents felt their neighbourhood was a very or fairly safe place to live;
- 80% felt very or fairly safe walking alone in their neighbourhood after dark;
- 8% of people felt crime had increased over the last year in their neighbourhood, 47% of these people said they felt this due to talking to other people in their area, 13% said it was due to personal experience of crime;
- The most common response when asked what factors contribute to crime level were Alcohol/Drugs (27%) Unemployment (6%) and Gangs/Youths (5%);
- 86% of people said that fear of crime does not prevent them from taking part in everyday activities

Trends

- Crime trends in Dundee continue downward by about 7% (three year rolling average);
- At the end of 2011 figures highlighted that there was an overall 24.5% reduction in crime in Dundee compared to the same time in 2010. That represents 1727 fewer victims of crime and is the lowest level for three years;
- Figures show a 17% reduction in robbery, 29% reduction in vandalism and with almost one in three crimes detected;
- A 40% reduction in domestic housebreaking and with more than one in three crimes detected (33.7% - and 11% improvement on a year ago). Similarly vehicle crime and reports of youths causing annoyance are at a four year low.

Neighbourhood

The 2012 Dundee Citizens Annual Survey outlined that:

- 57% of respondents in the annual survey had stayed in their house 10 years or more;
- The top two reasons for what people liked best about living in their neighbourhood was it was quiet and peaceful (38%) and good neighbours (35%);
- 59% of people said there was 'nothing' that they did not like about their neighbourhood, 6% said anti social neighbours and 4% said drug problems;
- 93% of people felt the condition of their house was very good (50%) or fairly good (43%).

Dwellings

- The 2010 estimate of the number of dwellings in Dundee City is 70,401;
- The proportion of these households receiving a single adult Council Tax discount is 43%. For Scotland, this figure is 38%;
- The largest proportion of the dwelling stock in Dundee is made up of flatted properties, 53% of properties in Dundee are flats;
- Owner occupation accounts for just over 50% of the stock, private rented 20%, Local Authority 18% and Housing Association 12%.

Projected Households

- The total number of households in Dundee City is projected to change from 70,400 in 2010 to 81,740 in 2035, which is an increase of 16%. This increase is expected to be in lone person households and those with one adult and one child;

- Two person and more households are expected to decrease.

New Build

Housing has a key role to play in encouraging and enabling the creation of successful, quality places to live which contribute to the identity of the city. The recent recession has led to a considerable reduction in new build rates around the city and an overall downturn in the housing market.

- Annual completions have fallen from 835 in 2008 to 308 in 2012;

- Private new build has remained around 50% in 2011 and 2012;

- There has been an increase in public sector new build in 2012.
Homelessness

- Total homeless applications reached 2,788 in Dundee in 2008/9, this decreased to 1,611 in 2011/12. The profile of homeless applicants in Dundee largely mirrors the national situation. There was a reduction in the number of homeless applications of 19% in 2011/12 and in Dundee this was 16%.

- Youth Homelessness (aged 16 – 24) also peaked in Dundee in 2008/9 at 630 applicants which represents 28% per head of population. In 2011/12 there were 441 applicants from the 16 – 24 age group and this represents 19.7% of the population against a Scottish average of 18.9%. A pilot project has been running in 2012/13 with 16/17 year olds, this has shown a 14% reduction, and the project has now been extended to include 16-21 year olds from 4 February 2013.

- Overall homeless households accounted for an estimated 43% of available social lets during 2010/11, and have been at similar levels since 2008 – 09. In Dundee the target proportion of lets for people assessed as homeless is 45% of all council vacancies. In 2010/11 Homeless Applicants achieved 49% (595 lets). Additionally, 203 applicants were successfully referred to Registered Social Landlords in 2011/12.

2.8 ENVIRONMENT

- Over 34% of waste was recycled or composted. This was a higher percentage than the other main cities.

- The amount of waste sent to landfill dropped from 13,100 tonnes in 2007 to 3,500 in 2011.

Fig 26: Ktonnes of Waste to Landfill

- Road transport CO₂ emissions have dropped from 215 tonnes in 2005 to 206 in 2011. Overall CO₂ emissions have reduced from 1058 tonnes to 867 in Dundee City.

Fig 27: Carbon Dioxide (CO₂) Emissions

Derelict Land

- The amount of hectares of land classified as derelict in Dundee reduced from 42 hectares in 2007 to 14 hectares in 2011.

2.9 TRANSPORT
• The percentage of households with no car or van is significantly higher (10.8%) in Dundee than in Scotland as a whole. Nevertheless, it should be noted that car ownership is usually considered as more crucial by people in rural areas than by those resident in large urban settlements such as Dundee.

• The number of registered vehicles in Dundee City as 2010 was 57,756 in comparison to 57,189 in 2007.

Section 3 - Cross-cutting Priorities

3.1 LOCAL COMMUNITY PLANNING AND COMMUNITY ENGAGEMENT

The term Community Planning implicitly establishes the importance of ensuring that communities have a voice in representing their needs and participating meaningfully in partnership arrangements. For many years this has been the focus of determined efforts by Dundee City Council, individual Community Planning partners and the Dundee Partnership as a whole.

The most meaningful expression of Community Planning is seen at the neighbourhood level as strategic outcomes address the local needs of individuals, families and communities.

Local Community Planning Partnerships (LCPPs) are now well established in each of the 8 multi-member wards and continue to flourish. These are the means by which the national and Dundee outcomes are combined with priorities emerging from local areas to shape city-wide and local action. They bring together elected members, community representatives and partner agencies with the common purpose of improving services and communities.

All LCPPs have adopted a new Local Community Planning for 2012-2017 and these were launched in May 2012. They have informed the overall priorities set out in this SOA. Across all the areas of the city, the top issues identified were:

- substance misuse and the need to raise awareness of services, support to users and support for those affected;
- availability of community facilities;
- improving community wellbeing;
- providing accessible and understandable information to communities;
- support for Job Clubs and training, further education and employment;
- providing greater range of activities for young people;
- providing and maintaining high quality green and open spaces;
- increased support for money and debt advice and management; and
- reducing levels of anti-social behaviour including litter, dog fouling and graffiti.

Local Community Plans contain a range of outputs and outcomes which define and identify priorities for action. Measurement of the achievement of these actions is undertaken annually. This has been enhanced by developing a framework to assess the impact of Local Community Plans from the perspective of service planners/providers, those actively engaged in community groups and the general public. Responses showed the positive impacts:

Service planners/providers found that local community planning provides an important focus for council departments, community organisations, voluntary organisations and local people to come together to address agreed priorities collectively. It was recognised that the Local Community Planning Partnerships provide a robust structure and effective mechanisms to assist in closing the inequalities gap.

Active and engaged communities confirmed that they felt involved in making and influencing key decisions affecting their community and that agencies were generally responsive to the
views of local people through Local Community Planning processes. Members of community
groups/organisations felt involved and aware of how decisions had been reached and that their
involvement had increased their awareness and confidence. They recognised that many
members of the public were not aware of the Local Community Plan and that collectively there
is a need to raise more awareness and seek increased involvement from those persons who
are currently not connected.

The majority of members of the general public confirmed that while they were not aware that
Local Community Plans were being implemented, they did notice changes that had been made
in their immediate neighbourhood or close proximity to their home.

The previous Local Community Plans covering the period from 2008-2011 outlined 782 actions
to be implemented across the city including the creation of major new Community Facilities in
St Mary's and Whitfield. More than 90% of the objectives prioritised were achieved and the
Dundee’s Local Community Planning Partnership Model was held up as an example of good
practice by Audit Scotland. Each new Local Community Planning Partnership has worked with
other stakeholders to consult widely and develop outcome based Community Plans for the
period from 2012-2017. Theses were launched in May 2012 following an extensive community
consultation over a six month period between May and October 2011. A total of 16,000 Local
Community Plan Summaries have been distributed to community venues and public places
across the city. They can be viewed at http://www.dundeepartnership.co.uk/content/local-
community-planning

The Partnership and Dundee City Council have responded to one of the top local priorities
investing in a city-wide programme to improve community facilities. These developments
range from significant improvements to existing facilities as well as some new builds.
Engagement frameworks have been created to ensure that local people are fully involved in
shaping facilities and the services and activities that they would like to see delivered for their
communities.

The potential for enhancing community control of local facilities is being progressed through the
development of a community asset transfer policy. Partners and interested community groups
have participated in consultation on the Community Empowerment and Renewal Bill and await
the second draft.

Audit Scotland has confirmed that the Dundee Partnership is founded on a sound approach to
Community Engagement and has a strong track record of working with local communities and
taking a systematic approach to finding out the needs and concerns of residents and
customers. Across the Partnership, there is an ever-increasing appetite for effective
Community Engagement as partners, groups and organisations seek to improve their policies
and services in response to local needs. Much of this is built into the Local Community
Engagement Action Plans which have been agreed for each ward/LCPP. While the
Partnership is keen to develop Community Engagement generally, it is important that this
activity is co-ordinated to ensure that effort is joined up where possible and that duplication is
avoided. To achieve this, a new model for Community Engagement was developed during
2011. it reflects the various levels and methods of engagement throughout the partnership and
aims to ensure that there are "routes" of engagement with the key communities of place,
interest and identity in Dundee. This model underpinned the Dundee Partnership Community

New vehicles for community representation continue to emerge and the Partnership has been
committed to find creative ways to bring members of city-wide groups together. At the same
time, there is a growing need for partnership groups and agencies to present, discuss and
shape their policies and services through engagement with local communities. Following
consultation, it was agreed that a way of achieving this would be through a Dundee Partnership
Community Conference.
Five Dundee Partnership Community Conferences have been held since October 2010. These have focused on priorities identified by local communities - alcohol misuse, drugs misuse and tackling poverty, employability and the impact of welfare reform. Attendance from community representatives and local people has been very encouraging and has enhanced the range of ways that local communities can positively influence city-wide issues in a strategic manner.

The Dundee Partnership and the Council recently confirmed their commitment to Involving Young People in Decision-Making. The central part of this commitment is supporting young people to create their own groups and structures on their own terms to which they can become involved and have their voices heard. One key example of this is the establishment of Dundee Youth Council and the extension of communications between the Youth Council, various Youth Action Groups and Local Community Planning Partnerships and Community Regeneration Forums. Young people have attended Local Community Planning Partnership meetings on a frequent basis to give presentations on work that they are undertaking and in some of the Regeneration areas. Young people have been supported to create Working Groups to make recommendations to the Community Regeneration Forums on applications relating to work with young people.

Overall, significant progress has been made in involving young people influencing Local Community Planning processes and in the creation of the Local Community Plans for 2012-2017.

The Partnership is currently in the process of developing a new integrated Community Learning and Development Strategy for the city. Reflecting the recent Scottish Government guidance, this will direct and incorporate the engagement and capacity building activity of all community planning partners across all of our strategic outcomes. A number of consultation events with a broad range of public and voluntary sector partners have been held with a view to agreeing the new strategy in the summer of 2013.

3.2 FAIRNESS AND INEQUALITIES

Levels of poverty and inequality in Dundee have remained stubbornly high despite the many efforts of partners. Deprivation as measured through the Scottish Index of Multiple Deprivation is largely unchanged and as a result the Dundee Partnership has developed a Fairness Strategy to challenge poverty and promote inclusion in Dundee. [http://www.dundeepartnership.co.uk/sites/default/files/DP%20Fairness%20Strategy%20June%202012.pdf](http://www.dundeepartnership.co.uk/sites/default/files/DP%20Fairness%20Strategy%20June%202012.pdf) (For full details on levels of poverty, see Outcome 7).

**Key Aspects of Poverty in Dundee**

Within the overall profile of poverty in Dundee, there are three particular aspects which need to be addressed if the strategy is to achieve fairness for those struggling to make ends meet, and if we are to prevent poverty impacting on our children and future generations.

There is a greater likelihood of child poverty than any other age group. In 2008/9, 17,830 children in Dundee lived in low income households. Children who grow up in poor households are more likely to have low self esteem; play truant; leave the family home earlier; leave school earlier with fewer qualifications and be unemployed/economically inactive as adults.

Levels of in-work poverty in Dundee have remained stubbornly consistent at around 6% to 7% of the population. In-work poverty is experienced by individuals and families in households with incomes below the poverty threshold despite one or more members being in employment. This group contains children and non-working adults. Half of the children in poverty in Scotland live in households where at least one adult is working. In-work poverty is fundamentally shaped by wage levels and working arrangements. In 2009, 20% of all jobs in Dundee paid less than £7.13 per hour; 10% of full-time workers earned £6.75 or less per hour; and 40% of part-time
male workers and 30% of part-time female workers earned less than £7 per hour. Dundee also has the highest rates of part-time employment for any Scottish city.

In 2009, 15,000 households in Dundee (22%) were in fuel poverty including 3,000 families and 8,000 pensioners. Since then, rapid rises in the cost of energy have outstripped any rises in household income resulting in the probability that levels of fuel poverty will have increased dramatically in Dundee. Fuel poverty is defined as the need for a household to spend over 10% of its income to achieve adequate temperatures for health and comfort.

**Working to Achieve Fairness in Dundee**

The Fairness strategy has three complementary strategic themes which reflect different aspects of the framework and our desire to address the causes of poverty, to respond to the needs of those in persistent poverty and, crucially, to offer routes out of poverty.

We will strive to ensure that people in Dundee:

- **have a fair household income** by providing employment opportunities, effective financial inclusion support, and sensitive charging policies and concession schemes;

- **have someone to turn to** in their families, communities and in services to help them to feel valued, cared for and supported and so that they can have the sense of purpose and security we all need; and

- **have hope for the future**, by providing support to develop confidence, skills and opportunities to achieve a better quality of life.

While this Partnership believes that income inequality is the root of poverty, we recognise that we must be able to address all aspects of deprivation if we are to turn around the life chances of many in our community regeneration areas. Based on the national framework for wellbeing produced by Health Scotland, our framework for fairness and inclusion reflects the interconnected outcomes we need to achieve.

Following extensive consultation of the draft Fairness Strategy, an action plan was published in June 2012. It addresses the needs of priority groups as highlighted by the Tackling Poverty Board for Scotland and emphasises the factors most likely to have a direct relationship to poverty in the city, employment; education and skills; benefit advice and income maximisation; childcare; and affordable and accessible services. The first 6 month progress report on the Fairness Action Plan was presented to the Partnership in December 2012.

The Partnership is currently working with the Poverty Alliance on a programme of training and community involvement to support the strategy and give a voice to those experiencing poverty in the city.

The biggest obstacle to reducing poverty in Dundee is, undoubtedly, the impact of welfare reform which estimates suggest will remove up to £58million per annum from individuals and families in the city. The Partnership is working closely to identify potential impacts and support people who will be affected. The quality and co-operation evident between the voluntary sector, Job Centre Plus and departments across the Council is crucial in offering multi-dimensional support on issues such as housing, income maximisation, digital inclusion and employability.

Considerable dialogue has taken place over the last two years across a range of public, voluntary and private organisations to consider the adoption of a co-ordinated and creative approach to tackling inequalities in Dundee. A working party of entrepreneurs in Dundee have subsequently developed a plan to evolve a new solution through the creation of an independent Dundee Inequalities Strategy Team. The team is intended to design and deliver a new strategy over the next three to five years and will include experts in the fields of data analysis,
community engagement, social economic and public health. Efforts to secure the resources to establish the team are underway.

3.3 **MENTAL WELLBEING AND THE EQUALLY WELL TEST SITE**

Dundee Partnership has a long-standing commitment to improving the mental wellbeing of citizens, and reducing mental health inequalities, in line with the Scottish Government's identification of mental health and wellbeing as a national strategic priority. This is because:

- Mental health and mental health problems are directly related to a person's ability to function well in society and vice versa;
- Poor mental health has social and economic consequences across healthcare and other systems; and
- Mental illness is more common in more deprived areas.

In Dundee’s SOA 2013-2017 the importance of these national priorities is reflected in the strategic outcome 4:

- People in Dundee will have improved physical health and wellbeing and will experience fewer health inequalities.

Towards a Mentally Flourishing Scotland (2009), the Scottish Government action plan for mental health improvement, located mental health and wellbeing firmly within Community Planning Partnerships. It was based on a social model of health, with the aim of embedding mental health improvement across services, communities and plans. Its successor, the Mental Health Strategy for Scotland 2012-15, brings together the key messages from TAMFS along with learning from Delivering for Mental Health. It recognises a more mature understanding of mental health in the context of services and determinants and seeks to bring together action on mental health improvement and improving mental health services.

The Scottish Government approach to tackling Scotland's significant and enduring health inequalities is set out in its national action plan, Equally Well (2008). The plan recognises the complex underlying reasons for health inequalities and proposes changes in ways of working within and across public services as major contributors to improvement.

In 2008, Dundee made a successful proposal to host one of 8 national test sites sponsored by the Scottish Government as part of the implementation of Equally Well. Each test site focused on a different Equally Well priority, and in Dundee, the aim was to work in a disadvantaged community (Stobswell) to test news ways of working, predominantly in public services, to tackle health inequalities and improve community mental wellbeing. Improving mental wellbeing was seen as a long term outcome which can only be achieved if the influences on wellbeing are addressed. The test site acted as a catalyst for change, working closely with local services and the community to identify influences, indicators and assets for mental wellbeing and to raise awareness of, and build capacity for, mental health improvement.

The approach of the test site focused on:

- Using community development approaches to consult, engage, involve and respond to mental wellbeing issues;
- Increasing understanding of the impact of mental wellbeing on a very wide range of outcomes;
- Supporting all stakeholders to recognise and develop their role in improving mental wellbeing, on their own and in partnership with others;
• Strengthening sources of support for mental wellbeing e.g. mental health literacy programmes, SOS (Sources of Support) pilot social prescribing scheme

• Balancing universal and targeted approaches; and

• Integrating mental wellbeing across services and plans.

The test site proposal to the Scottish Government included two specific actions to implement a pilot social prescribing scheme and a mental health literacy programme in Dundee. These initiatives evaluated positively and provided invaluable learning and evidence for the roll out of Equally Well.

The pilot Social Prescribing Scheme (SOS: Sources of Support), was a partnership between the test site, Dundee Healthy Living Initiative and Maryfield Medical Centre. It involved developing a new approach to meeting complex needs, new cultures and ways of working within primary care, and stronger more effective links between health services and a wide range of community based services and activities. GPs refer patients with poor mental wellbeing to SOS link workers, who help them to identify influencing factors, and support them to access a wide range of non-clinical sources of support that help address the causes and consequences of their condition. In the first year, SOS had over 120 GP referrals, and 50% of patients engaged with the scheme. There were 119 link worker referrals onto 47 different community services or groups, and a further 36 referrals into Dundee Healthy Living Initiative activities. Overall, patients found the scheme appropriate to their needs, helpful, flexible and accessible. This included patients with complex and enduring needs who may be difficult to engage and support, as well as patients with no previous history of engagement with any services apart from primary care. Where pre and post intervention data was available for patients who completed the programme, significant improvement was shown in mental wellbeing and functional ability.

The test site's work to improve mental health literacy grew from the co-ordination and delivery of a community based programme, involving the design, piloting and evaluation of the Mind Yer Heid awareness raising session, to expanding mental wellbeing awareness into the Continuing Professional Development programmes of early years and education staff, and the development of a training for trainers course to build the capacity of staff from a wide range of organisations to deliver Mind Yer Heid sessions to their own clients. Almost 250 local people, staff and volunteers participated in these sessions in 2010/11 and external evaluation showed significant positive changes in awareness of mental wellbeing, influences on wellbeing and how to protect and promote wellbeing.

The main learning from the test site concerned:

• the strength of the contribution that a focus on mental wellbeing can make to a wide range of inequalities outcomes;

• the achievability of integrating wellbeing into existing structures and services; and

• targeting resources towards improving community mental wellbeing and its influences in a sustainable manner.

Roll out of the test site approach and social prescribing are two of the top three priorities for health equity as agreed by Dundee Partnership, Dundee CHP, Healthy Dundee and NHS Tayside. In June 2012, NHS Tayside Endowment Committee Board of Trustees awarded £203,524 to the Equally Well partnership, led by Dundee CHP, to take this forward via a transitional model for health equity. The transitional model will operate in Dundee throughout 2013 and to date has involved:
• Profiling in the Community Regeneration Areas identified for local roll out and approval from Local Community Planning Partnerships for the recommended priority datazones;

• The establishment of health and wellbeing networks and the formation of local wellbeing workforces;

• Community engagement to identify what local people think matters for wellbeing;

• Identification of a further two GP practices to participate in the roll out of the social prescribing scheme; and

• Support for a range of services to adopt social prescribing approaches.

The transitional model is governed by an expanded Equally Well Core Group to reflect the scaling up of the original test site. Progress on the roll out of Equally Well is reported to Healthy Dundee as the lead group for the Health and Wellbeing theme in the Community Planning Partnership and also directly to Dundee CHP and NHS Tayside. Equally Well is reflected in SOA outcomes, and indicators have been developed specifically for the work of the transitional model.

The Equally Well Core Group has developed a project plan to help identify future resources to further support the roll out of the Equally Well approach. Much of this is predicated on services being supported to change the way they go about their daily business to better address the determinants of health inequalities and mental wellbeing.

3.4 SUBSTANCE MISUSE AND THE DUNDEE ALCOHOL AND DRUG PARTNERSHIP

The Dundee Alcohol & Drug Partnership (ADP) was established in October 2009 and is location within the Dundee Community Planning Partnership (CPP). The ADP provides a strategic direction in respect of substance misuse for the CPP and supports of all other theme-groups to develop a coherent and co-ordinated response to substance misuse.

The ADP works closely with a range of both strategic and crosscutting themes, including the Children and Young People’s Protection Committee, Integrated Children’s Services, Community Safety Partnership and the Violence against Women Partnership.

The ADP has commissioning responsibilities, especially with respect to ring-fenced alcohol and drug funding, and its commissioning process reflects the needs and interests of the Dundee Partnership as a whole.

The ADP continues to develop a Recovery-focused care pathway which is based on closer links with generic services and local communities (see further detail on Recovery below). The ADP aims to ensure that high quality services are available in Dundee to individuals, families and communities affected by substance misuse and that these services are delivered by a highly qualified and motivated workforce.

To achieve these aims, the ADP has already embarked on an extensive research process to establish the current position in terms of recovery-focused services in Dundee. This process has involved service users, local communities, staff from both specialist and generic services, and strategic leaders. In partnership with the Angus and Perth and Kinross ADPs, a Needs Assessment (NA) process was developed, initially focusing on the needs of individuals affected by homelessness and substance misuse and children affected by parental substance misuse (CAPSM). Following completion of these two projects the NA programme will extend to other areas. We are also in the final stages of the development of the Tayside Substance Misuse Information System (SUMIT) that will provide real-time information from all the specialist services, as well as information on outcomes.
Focusing on a population-wide approach to alcohol misuse, the ADP has developed the Dundee Focus On Alcohol project (FOA). FOA engages with individuals of all ages and with all communities, through a range of campaigns and events, to encourage and support them to drink responsibly. Working closely with the Dundee Licensing Forum, a report on the overprovision of alcohol in Dundee was developed and was made available for the Dundee Licensing Board.

ADP led service review

The ADP is currently embarked on a broad ranging review process encompassing all service delivery in Dundee. The main objective of the review is to ensure that services are shaped to meet current needs and are in the strongest position to deliver improved outcomes for individuals and communities across the City. Efforts will be more clearly directed “up stream”, to be more preventative while maintaining a focus on those who require treatment and rehabilitation. The future model of delivery will ensure that citizens are placed at the centre and will be developed with the involvement of local communities. The partnership as a whole is reviewing its community engagement strategy and this refreshed strategy will provide the opportunity to fully engage communities in this debate. The review will be based on evidence of levels / nature of need current effectiveness and efficiency. The Dundee CPP has a clear focus on inequalities. Although the ADP cannot address this entire agenda, work on re-modelling should link to the partnership’s focus on inequalities. The review will be undertaken throughout 2013 with expected completion at year end.

The review process will be delivered in 4 stages:

Stage 1: Description of the current situation based on the population profile, evidence needs and feedback from communities and other consultation processes (as described above).

Stage 2: Development of a new model, setting out a vision and a pathway that describes a recovery model.

Stage 3: Realignment, commissioning and testing the model.

Stage 4 Review and refinement of the model.

Profiling substance misuse in Dundee
(update profile information will be available by April)

Alcohol

While men and women living in affluent areas are more likely to drink hazardously than those in less affluent areas, those living in the most deprived areas are up to four times more likely to end up in A&E as a result of their drinking. In addition, those living in deprived areas are also four times more likely to be admitted to hospital as a result of their drinking than those in the least deprived areas.

In 2010/11, there were 1,995 alcohol-related presentations to A&E (Ninewells) by Dundee residents

In 2010/11 there were 1,028 alcohol-related hospital discharges (10% increase 09/10)

In 2010 58% of 13 year olds and 78% of 15 year olds in Dundee reported that they had had an alcoholic drink. This was similar to the proportions shown across Tayside and indeed Scotland as a whole.

Of those in Dundee who reported they had an alcoholic drink:
• 9% of 13 year olds and 20% of 15 year olds reported they drank alcohol at least once a week;

• 64% of 13 year olds and 77% 15 year olds, reported they have been really drunk at least once; and

• 30% of 13 year olds and 48% of fifteen year olds had asked someone else to buy alcohol for them in the four weeks prior to survey.

Drugs

In 2009/10 it was estimated that in Dundee there are 2,800 problematic drug users – prevalence rate of 3.29% of those aged 15-64. The estimated prevalence rate for Scotland for the same period was 1.71% (59,600 individuals).

Between 1996-97 and 2006-07, the number of drug seizures in Tayside rose year on year from 1,008 to 2,135. 34% of these seizures were class A drugs, 7% were class B and 59% were class C. In 2010-11, the number of drug seizures in Tayside was 2,129. 26% of these seizures were class A drugs, 56% were class B and 18% were class C.

In 2010 21% of 13 year olds and 43% of 15 year olds in Dundee reported they were offered drugs. This is slightly higher than the Scottish average for the same period, which is 16% of 13 year olds and 42% of 15 year olds who reported they were offered drugs. The drug most commonly offered was cannabis.

Dundee ADP Delivery Plan

A full ADP Delivery Plan for Dundee was submitted to the Scottish Government in June 2012. It is available in full on the Dundee Partnership website and it includes the following priority actions:

Children and Families
• continue to drive the implementation and evaluation of Supporting Vulnerable Families projects and the New Beginnings service; and
• continue to redesign and reshape services in line with the recommendations contained in the young Peoples needs assessment report.

Recovery
• continue to develop the Recovery care pathway for all service provision in the City; and
• improve engagement on Recovery through the strengthening of existing links with community groups, family support groups and Community Planning Partnership structures.

Prevention
• reduce the prevalence of substance use amongst young people in Dundee; and
• support and extend to other settings the future delivery of Screening and Brief Intervention for alcohol.

Community engagement
• strengthen the engagement with local communities that enhances the overarching Dundee Partnership and Community engagement model; and
• involve communities in developing local solutions in relation to their concerns regarding substance misuse through Local Community Planning Partnerships.

Safer Communities, Enforcement and Availability
• work with partners to increase youth diversionary activities for young people engaging in substance misuse; and
• support enforcement activity in respect of individuals and groups concerned in the supply of illegal drugs, in particular Class ‘A’ Drugs.

Performance Measurement
• Work with key partners (including Tayside Health Advisory Forum and Dundee University) to complete the SUMIT information system for substance misuse; and
• Work in partnership with all substance misuse agencies to improve the quality of the outcomes reporting structure.

Prevention of overdose, drug deaths and support for the Naloxone Program

In addition to the work outlined above, all services in Dundee strive towards reducing and ultimately eliminating drug deaths in the City. Each key action outlined above contributes to the aim of preventing drug deaths. Specific actions to prevent drug deaths include:

• Develop information-sharing protocol for responding to non-fatal overdoses, to allow information from Police and Ambulance services to be passed on to treatment and care agencies;
• Continue to provide Overdose Prevention training to service users, carers and community members, and extend the take home Naloxone Program to include all key partners; and
• Ensure the availability of accessible and appropriate harm reduction and treatment services that provide a range of evidence based recovery focussed options.

The Recovery Approach

There have been a variety of Scottish and UK Government reports over the last few years which have developed the view that a radical new approach is required to effectively address the needs of alcohol and drug users across Scotland. The Recovery process focuses on developing personal strength and resilience and is widely accepted as a more effective model than the more traditional models based around stabilisation, harm reduction and abstinence.

The nature of the Recovery process demands that services offer greater openness to and input from, users of services, carers, and local communities. It is therefore crucial that users of services, carers, and communities are placed at the centre of the process.

The principles of Recovery also offer professionals, communities and users of services a framework within which service delivery and improvement can be monitored alongside an individual’s progress through services. Alcohol and Drug Partnerships across Scotland will in future be measured not only on the reduction of problems associated with substance use, but also on the areas of an individual’s life which have been improved through service intervention.

DUNDEE CITY STATEMENT ON RECOVERY

This Recovery Statement Is Underpinned By The Principle That Every Individual Is Capable Of Recovery.

Recovery is about individuals improving their personal strengths and abilities to help them “live well” through both the good and hard times.

Within the alcohol and drug field, Recovery is about an individual’s journey beyond a life that is defined by substance use.

Recovery is driven by the individual but firmly based within their family and community. Recovery is most effective when families and communities help support this process.
3.5 EQUALITY AND DIVERSITY

A new public sector equality duty came into force in 2011 consisting of a general equality duty with three main aims, and specific duties.

The Equality Act 2010 places a General Duty on public authorities to have due regard to the need to:

- Eliminate discrimination, victimisation, harassment or other unlawful conduct that is prohibited under the Equality Act 2010;
- Advance equality of opportunity between people who share a protected characteristic and those who do not; and
- Foster good relations between people who share a relevant protected characteristic.

These three requirements apply across the "protected characteristics" of age, disability, sex, gender reassignment, pregnancy and maternity, race, religion or belief and sexual orientation. It also covers marriage or civil partnerships, but not for all aims of the duty.

Scottish guidance on implementation became available in June 2012 and outlined a range of actions supporting public sector general and specific duties under the legislation. Within this context, is a requirement for public sector organisations to develop and publish equality outcomes for a four year period by April 2013, and on a four yearly cycle thereafter. Progress towards achieving these outcomes is required to be reported on bi-annually. While the development of equality outcomes is a explicit requirement for partner agencies on an individual basis, SOA guidance acknowledges there is a potential role for community planning partnerships in supporting partner agencies in meeting their equality duties.

In Dundee, on a partnership basis, the vision is for public bodies to demonstrate the mainstreaming of equality and ensure that all individuals benefit equally from public services. Within this context, there has been a move towards a more integrated partnership approach that focuses on fewer but more practical actions.

As part of this approach, members of the Dundee Equality and Diversity Partnership identified three priorities which affect public, voluntary and community partners.

- Monitoring is an area where all partners wish to improve and there is scope for collective review of organisational and service monitoring to better inform and shape partner agency actions;
- All partners are determined to effectively engage with equalities groups and, while statutory partners’ consultation processes are at different stages of development, opportunities to build on the successes achieved to date will be followed up with greater sharing of information and more joined up engagement approaches developed; and
- Training is acknowledged across partners as a key element in progressing equality and diversity. There is a strong support around the development of joint training to achieve greater coverage, efficiencies and help share learning and expertise across partner agencies.

In 2012, the Dundee Equality and Diversity Partnership hosted an equalities partnership event which brought together statutory and voluntary sector agencies and service users. Significant themes emerged from these discussions that continue to shape partnership processes and the development of statutory sector equality outcomes. These themes are:
• Effective communication;
• Accessible information;
• Promote good relations across communities;
• More pro-active engagement and greater involvement;
• Better joined-up working; and
• Linking inequality and poverty.

Partnership equalities events will continue to be held to give impetus to equality and diversity across the city.

The shape of the existing Dundee Equality and Diversity Partnership will continue to evolve to reflect the changing context of partnership equalities in the city. The Equality and Diversity Partnership as a whole will meet twice annually and will also meet twice a year with the Equalities Forum which brings together representatives from across voluntary and community networks as a means of connecting communities of interest and the Dundee Partnership.

Equality Impact Assessments will also be built into the implementation of the SOA to ensure that community planning strategic theme groups address the potential for impact or opportunity offered.

In April 2013, statutory agencies will publish their new equality outcomes for the next four years. As a way of re-enforcing the ‘golden thread’ of community planning, Dundee City Council has developed equality outcomes aligned with those of the SOA. We will continue to work with statutory partners to ensure the sum total of our efforts supports improved equality outcomes within the city.
Section 4 - Dundee Outcomes

Outcome 1 - Dundee will be an internationally recognised city at the heart of a vibrant region with more and better employment opportunities for our people.

STRATEGIC CONTEXT

Dundee lies at the heart of a City Region providing employment opportunities and services to a 30 minute drive time population which exceeds 300,000. In 2011, there were 72,100 employee jobs in the city's boundaries and a further 2,000 engaged in self-employment. The largest sectors were Health (23.8%), Retail (12.6%) and Education (11.9%).

Economic regeneration over the last decade has been underpinned by the growth of knowledge based industries which employ 49.4% of the city's population compared to a Scottish average of 41.6%. The city's universities have established an international reputation for research and innovation and this has helped to drive the growth of key sectors such as life sciences and computer games development.

The global economic downturn has impacted on Dundee as elsewhere. Employment levels have fallen and levels of worklessness have risen and with 33.6% of employee jobs in the public sector in 2011, compared to a Scottish average of 26.4%, future constraints on funding could have a significant impact.

The prevailing economic climate, however, cannot dampen the sense that Dundee is undergoing a radical transformation which will leave the city well placed to benefit from an upturn in wider economic conditions. The £1 billion waterfront development, the flagship V&A at Dundee project and the opportunity to attract marine renewables investment provide confidence that the foundations for future economic growth will be firmly established over the next 5 years.

Economic Performance

In preparing this new single outcome agreement, the Dundee Partnership has undertaken a review of recent economic performance.

Between 2008 and 2011, overall job numbers in the city fell by 4.8%. Although this was an unwelcome trend, the scale of decline was less pronounced than for Scotland (5.3%) as a whole. Despite the overall drop in job numbers, the number of knowledge intensive jobs remained stable at 35,600.

The overall share of people seeking employment (ILO definition) rose however from 5.9% in 2008 to 8.9% in 2011, with the 16-24 year old age group particularly affected.

Against a challenging environment, economic recovery and growth and the achievement of improved employment opportunities for the people of Dundee are our key priorities.

The overall outcome is that Dundee will be an internationally recognised city at the heart of a vibrant region with more and better employment opportunities for our people.

Future economic growth will be achieved through a range of strategic approaches. Priority will be given to:

- Creating the physical infrastructure required to provide a platform for future growth (e.g. Dundee Waterfront, V&A Dundee)
- Supporting the development of sectors where Dundee has demonstrable strengths or opportunities to grow (e.g. Life Sciences, Digital Media, Offshore Renewables, Tourism)
• Addressing above average employability levels and in particular worklessness amongst young people

Physical Regeneration

Partners will seek to ensure that effective physical infrastructure is in place to support future growth. The £1 billion transformation of Dundee’s Waterfront will accelerate over the period 2013 to 2015 with realigned approaches to the Tay Bridge and the demolition of Tayside House and the Olympia swimming pool. Dundee Waterfront is one of the UK’s top 20 regeneration projects spanning 5 distinctive development zones. The scale of the project is reflected in forecasts that it could eventually support 9000 jobs. Development plots will become available over the period 2013 to 2017 and a marketing campaign is in place to help secure investments. In 2013 alone over £100 million of capital projects will be started or completed including the District 10 project at Seabraes Yard which will support up to 38 creative industry sector jobs in flexible office space constructed from recycled shipping containers. Other projects which will be pursued include a new railway station concourse, Park and Ride facilities and super fast broadband services.

Growth in Key Sectors

Supporting key sectors to grow and maximise employment opportunities will remain a key focus. Dundee has achieved critical mass in a number of key sectors and work will continue to deliver partnership initiatives such as Biodundee, Tayscreen and Digital Dundee in order to stimulate future growth.

In terms of the tourism sector, V&A at Dundee provides an opportunity to position Dundee and the wider region as an international visitor destination and is expected to generate 500,000 visitors in its first year of operation and 300,000 thereafter. Significant progress has already been made to secure the £45 million capital target, with £15 million commitment from the Scottish Government and first stage approval of £9.2 million in Heritage Lottery Funding. Work to secure the remaining capital and future revenue funding will continue. Partners will also work to ensure that the economic benefits of increased visitor footfall are optimised for existing businesses. V&A at Dundee will be a major asset that underpins the marketing of Dundee Waterfront to future investors. Plans for the museum have already inspired commercial confidence. Customs House at Dundee port is to be converted into the city’s first 5 star boutique hotel, with work commencing in May 2013, and Malmaison opens its new Dundee hotel in September 2013. The local community was engaged in the process of choosing the winning design for V&A at Dundee and a community engagement programme is being developed to ensure that V&A is accessible to visitors and local people alike.

Renewables

There is also a significant opportunity to position Dundee as a leading centre for the offshore renewables sector. Dundee City Council, Forth Ports and Scottish Enterprise are working in partnership under the Dundee Renewables banner to ensure that the city benefits from the investment required to help Scotland and the UK meet their renewable energy targets. Dundee has been identified as one of the key development sites in the National Renewable Infrastructure Plan drawn up by Scottish Enterprise. Renewable Energy Enterprise Area status has been granted by the Scottish Government. A memorandum of Understanding has been signed with SSE and discussions with investors will continue to ensure that Dundee maximises the job creation opportunities in this emerging sector. Offshore renewables represent a major growth opportunity not only for Dundee but for Scotland as a whole. In order to successfully capitalise Dundee is one of ten local authorities working together under the East Coast Renewables strategic partnership to address issues such as supply chain development and skills, research & development and knowledge transfer. The partnership will continue to work closely with Scottish Enterprise and Scottish Development International to develop the sector.
Business Growth

Providing support to existing businesses to maximise their growth potential and consider new markets will remain a key goal and Scottish Enterprise will continue to provide this service.

Low levels of business start up in the city will be a key focus and support will be offered through Business Gateway, Dundee City Council E-Zone project and the Jobcentre Plus New Enterprise Allowance scheme to encourage improved levels of entrepreneurship.

Employability

Addressing worklessness and in particular rising levels of youth disengagement will be a key priority. Between 2008 and 2013 the Dundee Employability pipeline has helped to deliver an integrated service to workless people in the city bringing together support agencies offering seamless support to help clients move into work or other positive destinations. Employability pipeline provision in the city has been refocused to ensure that it complements Department for Work and Pension provision and will be reviewed to ensure that services continue to meet the needs of key priority groups. Since 2008, the Dundee Employability Pipeline has been underpinned by an employability management information system used by key delivery partners. This has supported performance monitoring and provides the evidence required to strategically evaluate and design effective future interventions. Domestic and European funding will be aligned to maximise the resources available to support clients. Under 25s represent 44% of those who receive support through the pipeline and young people will continue to be a key priority. Skills Development Scotland will work with partners locally to deliver Opportunities for All, provide Modern Apprenticeships places, deliver Employability Fund provision and deliver careers advice and guidance in innovative ways such as through the My World of Work online service.

Further and Higher Education

Dundee's higher and further institution will continue to be vital drivers of the local economy and knowledge industries in particular. Collectively they provide employment for 4,700 (6% of the local economy) and education for 22,000 fulltime equivalent students annually. University of Abertay Dundee has established a world class reputation for digital media teaching and has driven the growth of the computer games industry in Dundee and further afield. This work will continue underpinned by Abertay's £2 million digital prototype fund. University of Dundee has helped to establish Dundee as a world class centre for life science research and as well as undertaking ground breaking drug discovery work will continue to pre-incubate fledgling biotechnology companies. Dundee College will continue to be the main provider of vocational training and workforce development in the city and undertake knowledge transfer activity with local industry.

Image

Finally, enhancement of the city's image and perception will remain a key priority. Dundee Waterfront and the development of V&A at Dundee are helping to change perceptions of Dundee. Engendering a positive image of Dundee will help to secure new investment and attract the best talent to stay in or relocate to the city. The One City Many Discoveries campaign will continue to develop innovative approaches in pursuit of this agenda.

The following high level "economic health check indicators" have been selected to provide a measure of progression. In order to establish targets which are both stretching and realistic a review of past performance has been considered alongside forecasts of anticipated future growth prospects and analysis of the opportunities the city can capitalise upon. Targets for all 8 indicators are modestly positive. This reflects confidence that the projects and initiatives that are in place can deliver jobs but also a degree of caution and uncertainty surrounding macro-economic conditions.
**Dundee Outcome 1 - Dundee will be an internationally recognised city at the heart of a vibrant region with more and better employment opportunities for our people.**

**Intermediate Outcomes**

| 1a) | Dundee’s economy grows through a focus on key sectors, growth companies, business start-ups and inward investment. |
| 1b) | Dundee has effective pathways to employment which enable our people to progress into sustainable jobs. |
| 1c) | Dundee tackles youth unemployment by moving more of our young people into positive destinations. |
| 1d) | Our physical infrastructure supports and enables sustainable economic growth. |
| 1e) | Dundee’s Waterfront underpins the city’s economic growth and enables the creation of new local employment opportunities. |
| 1f) | We have improved the image and perception of the city and its region. |
| 1g) | Dundee and its region is established as an internationally recognised visitor destination enhanced by V&A at Dundee. |
| 1h) | Dundee is a leading centre for the offshore renewables industry in the UK. |
| 1i) | Our Higher and Further Education institutions drive growth in teaching and research and through supporting knowledge intensive industries. |

**IMPROVING OUR PARTNERSHIP AND PERFORMANCE**

Worklessness and low pay are major factors which accentuate inequality levels in the city. The Work and Enterprise theme will seek to positively address these issues by stimulating the creation of good quality jobs and by providing skills and training support to allow those from our most deprived communities to compete for work. In 2012/2013, 66% of those supported through the **Dundee Employability Pipeline** were community regeneration area residents and this focus will continue.

Social Enterprises provide a vehicle to contribute towards economic growth, generating and keeping wealth in poorer areas whilst delivering broader social and environmental benefits. Dundee has many excellent established social enterprises that have made a significant
contribution during a challenging economic period. In November 2012 Dundee City Council, in conjunction with Dundee Social Enterprise Network, published the city’s first social enterprise strategy and action plan. Actions to support development of the sector will be progressed over the lifespan of this single outcome agreement.

Employability and Youth Employment

The prevention agenda will be supported by focusing resources on young people who will be a target group for future employability pipeline support. The development and implementation of a youth employment plan that meets the needs of local young people and underpins delivery of the national youth employment strategy will be a key action area alongside development of a Dundee Partnership Employer Pledge. The latter will be piloted with a number of employers in 2013 to improve young person’s access to training and employment opportunities. Single points of contact have been established to assist with coordination of schools work experience and employer engagement activities. Dundee will also develop a youth employment initiative in 2013, underpinned by Scottish Government and European Funding that will fulfil the dual purposes of offering subsidised employment opportunities to young people whilst enabling local SMEs to grow their businesses.

The inclusion of clauses within procurement contracts which seek to secure employment and training opportunities for local people and secure wider community benefits have significant potential to improve the life chances of people in Dundee. Voluntary Community Benefit clauses have been inserted to secure training and employment opportunities when letting major infrastructure contracts such as Dundee City Council’s new headquarters and some Dundee Waterfront contracts. A Community Benefits from Procurement policy has been approved by Dundee City Council to ensure that we maximise the employment and training opportunities from the Waterfront and other major developments. The opportunity to use these in relation to the construction of V&A at Dundee is being actively explored and will be considered for other major capital projects.

Partners will also work to ensure that local people have the skills to compete in the labour market and to compete in sectors which have been earmarked as offering economic growth potential. Sector based work academies have been, or will be, established for sectors such as health and care, retail, contact centres, life sciences and engineering and will continue to provide a vehicle for the delivery of pre-employment training and work experience. The establishment of Energy Training East is also indicative of efforts to align skills development initiatives with sectors where job opportunities are expected to be generated and where economic growth potential exists. Energy Training East brings together Tayside’s Universities and Colleges and aims to provide the renewable energy industry with both training and R&D expertise. Training and support services will include apprenticeship level and nationally accredited technician skills programmes, bespoke technical skills courses and graduate and post-graduate level teaching and research.

Key Partnerships

The Work and Enterprise theme has a strong tradition of partnership working. Effective partnerships have been, and will continue to be, drivers of the major initiatives and projects that underpin delivery of our outcomes. These include:

- **Dundee Waterfront** - being delivered by Dundee City Council and Scottish Enterprise;
- **V&A at Dundee** - being delivered through Dundee Design Limited a partnership between the V&A, University of Dundee, University of Abertay Dundee, Dundee City Council and Scottish Enterprise; and
- **Dundee Employability Programme** - strategic coordination is delivered through a partnership of Dundee City Council, Jobcentre Plus, Skills Development Scotland,
This tradition of effective partnership working will be critical to future delivery. Better engagement between the public and private sector will be prioritised building upon the first Dundee Economic Summit which was delivered in March 2012. The event was delivered by Dundee City Council, Scottish Enterprise, Dundee and Angus Chamber of Commerce and Skills Development Scotland working in partnership and attracted 300 delegates from across the public and private sector. A second summit will be hosted in mid 2013.

V&A at Dundee provides an opportunity to establish Dundee as a major visitor destination and effective partnership working between Dundee City Council, Visit Scotland, the Cultural Agencies Network and private sector operators will be required to deliver a new Visitor Strategy for the city.

Delivery of Work and Enterprise outcomes is coordinated by a strategic theme group which meets quarterly and includes representation from Dundee City Council, Scottish Enterprise, Dundee and Angus Chamber of Commerce, Skills Development Scotland, University of Dundee, University of Abertay Dundee, Dundee College, Jobcentre Plus, Dundee Social Enterprise Network and TACTRAN. Following Audit Scotland's 2011 Review of the Contribution of Community Planning Partnerships to Local Economic Development, group membership was reviewed and VisitScotland accepted an invitation join the group reflecting the important role that the visitor economy will play in the city's future. The structure of the group will be kept under review throughout the period.
Outcome 2 - Our people will be better educated and skilled within a city renowned for learning and culture.

STRATEGIC CONTEXT

In shaping the future of the city, Dundee is having to analyse complex problems in new ways, bringing forward solutions that motivate and involve the whole community. Learning is seen as key to underpinning and sustaining positive change. A learning city is one which has at its heart, the development of both human and social capital; one which is addressing change for all and is inclusive of the social and cultural needs of its people. The continued growth in cultural, innovation and knowledge economy projects is helping to change the economic, physical and technological infrastructure of the city. It is essential to ensure that the opportunities and benefits, of the changing profile of Dundee, are open to all of its citizens. Learning and culture is seen as being at the core of supporting this change, not only for the economic benefits it brings but also as an essential component in a socially inclusive and culturally rich society.

Dundee is rich in formal learning opportunities, with 31,927 people studying for further and higher education qualifications, with 25,977 studying at degree level or above, and 5,950 in Further Education. Through partnership working there has been a coordinated effort to ensure the learning opportunities provided by College and University relate to the changing economy within the City and provide a route for school leavers to study in sectors that are linked to key economic developments and that retain graduates.

The learning opportunities provided through Community Learning and Development work of both the Local Authority and Voluntary Sector provide an initial return to learning and a progression route to volunteering, employment, further learning and active citizenship.

However, as with many cities, there is still inequality in the profile of people accessing learning and cultural opportunities and the link between low educational attainment and poverty remains. 13% of the population have low or no qualifications and there is a clear evidence that people living in Community Regeneration Areas have the lowest level qualifications. The SIMD statistics confirm that people in CRAs have lower incomes, fewer qualifications and higher dependency on key out of work benefits. The development of community learning opportunities targeted at the most disadvantaged and excluded communities promotes involvement in learning and increase skills and confidence to make positive changes. This has been highlighted in an Education Scotland Inspection, February 2013, which commented on the high quality community learning activities provided in Dundee and how they were helping improve life chances.

The percentage of students from CRAs accessing further and higher education is, on average 12%. This shows that a big disparity exists between people from the 15% most deprived data zones accessing further and higher education. When the figure for numbers of students from CRAs entering further education, is looked at in isolation, the percentage from CRAs rises to 42%. Whist access to Higher Education from CRAs is as low as 7%. This shows that the biggest barrier is to progression at degree level and highlights the level of inequality that still requires to be addressed.

Over recent years, public sector funding has reduced and Scotland, together with the rest of the UK, has faced significant economic challenges. In order to make best use of diminishing resources and to provide a more planned and focussed approach to the delivery of further education, the Scottish Government is reforming the post-16 education sector through the regionalisation of the college sector.

Through this reform, Dundee and Angus Colleges are working together to serve the Tayside region, building on their individual success to provide a more coherent and efficient service to learners, employers and other stakeholders. The two colleges have a long history of working
together and on through the merger, there is an opportunity to combine expertise, facilities and resources in a way that best serves the region.

The link between qualifications and income is well documented, with higher level qualifications being linked to greater life chances. There is also a strong intergenerational link between the transfer of learning and knowledge. It is established that by the age of three, children in the least educated families can be a year behind children with better educated parents. Our SOA outcomes acknowledge this gap and the need to **increase participation and reduce inequality** remains a key target.

Low skills require to be addressed, particularly for adults who have not participated in post school learning and who, we recognise, need additional support to make positive change. Scottish Government research estimates that 26% of the working population in Dundee demonstrates a consistent weakness in their literacies and that the number of school leavers in negative destinations is 17% compared to a Scottish average of 13%. The Partnership supports an average of 1,800 literacy learners each year, recording positive impact on wellbeing, confidence and employability, alongside an increase in Core Skills.

The **Literacies Partnership** is committed to reducing the negative impact of limited literacies skills and promoting a more socially inclusive Dundee with the focus being to target:

- vulnerable and excluded learners;
- Those at stages 1-4 in the employability pipeline;
- Those who need literacy assistance to undertake and sustain college courses; and
- Parents/carers to become engaged with and actively support their children’s learning in the early years,

The standing of Dundee's cultural sector has never been higher or attracted as much national and international interest, and the challenge has been to balance this external interest with the need to engage with the local communities particularly those who are experiencing the effects of inequality. Implementation of the **Cultural Strategy for Dundee** is seen as supporting the city’s efforts to promote a high quality of life, with a particular emphasis on engagement of young and old in aesthetic activities which have positive benefit for health and which are preventative. Delivery of the Cultural Strategy has crosscutting impact on a range of other strategic priorities, particularly relating to quality of life, learning, building stronger communities, promoting prevention and assisting recovery.

An extensive cultural outreach programme aims to ensure that there are accessible and affordable opportunities for all and that the audiences for Dundee's cultural attractions are from both within and out with the City.

Learning and inclusion is a key feature of the developments in the cultural sector which are helping attract investment, with the best example of this being the partnership working that is taking place to **bring the V&A to Dundee**. This has strong links to the success of the prestigious design and creative work being taken forward by our universities and college and the growing cultural network of organisations now based in the City.

During the course of the previous SOA Dundee managed the **growth in cultural attractions** available, with a large investment in infrastructure. The McManus: Dundee's Art Gallery and Museum, which reopened in 2010, now attracts 157,000 visitors per annum. The City now has 3 organisations achieving foundation status – cultural organisations The Rep, Scottish Contemporary Dance Theatre and the DCA.
Dundee Outcome 2 - Our people will be better educated and skilled within a city renowned for learning and culture.

**Intermediate Outcomes**

2a) Dundee delivers excellent cultural choice and opportunity for its citizens and visitors.

2b) The confidence and skills of the population is increased through Community, Further and Higher Learning.

2c) We have reduced inequalities through learning.

2d) We have increased levels of Adult literacy and numeracy.

2e) Dundee will have a positive reputation and self image as a result of achievements within a vibrant cultural sector.

**IMPROVING OUR PARTNERSHIP AND PERFORMANCE**

Under the auspices of the Learning and Culture Theme, a number of partnerships have been established.

- Cultural Agencies Network
- Cultural/Community Partners
- Festival and Events Co-ordination Group
- Dundee Dance Partnership
- Discover Learning
- Dundee Literacy Partnership
- ESOL network

Each of these groups report to the strategic theme group to ensure that there is co-ordinated and integrated delivery of learning and cultural provision in the city. They all include representatives form a cross sector of organisations including local and national voluntary groupings. The membership and specific remits of each of these groups is detailed on the Dundee Partnership website and is reviewed annually.
Cultural Strategy

Dundee’s Cultural Strategy is a key partnership approach to developing the cultural sector. It was approved in July 2009 and has provided the strategic framework within which developments of the sector have been taken forward.

It brings together key cultural agencies in the city to deliver on the following three objectives:

- To develop a range of opportunities which encourage and develop the creative abilities of Dundee’s citizens;
- To develop and support pathways which enable citizens to make the most of their abilities within the cultural and creative sector; and
- To continuously develop the excellent cultural environment in the city and to establish and promote Dundee as a creative city.

Each of these objectives is further divided into a series of specific actions which are detailed in the Action Plan and against which progress has been measured.

UK City of Culture 2017

Dundee City Council has committed to bidding for UK City of Culture status in 2017.

The city will be profiled nationally through the bid process and will structure its bid around the strengths of the cultural sector, the Waterfront Development and the social, economic and cultural benefits that would be derived from achieving UK City of Culture status. There are key milestones over the next nine months as the bidding process progresses. The outcome of the bidding process is seen as a win-win. Whatever happens, Dundee’s profile will be lifted nationally. Its aspirations to be viewed as a UK City of Culture will be recognised.

The bid itself will further strengthen collaboration between cultural organisations in the city. It will provide renewed impetus for integrated programming, joint marketing and shared services. The process of bidding has also strengthened links with neighbouring Councils who have agreed to collaborate in delivery, should be bid be successful. Community engagement and the link to learning are a key feature of the cultural developments, with extensive outreach being undertaken to include marginalised groups.

The learning partnership brings together representatives from the Local Authority, College and the voluntary sectors. The partnership has successfully targeted support to 3,641 adults per year to increase their skills and take up post-school learning to improve their personal, family, working and community life.

English for Speakers of Other Languages

The ESOL element of the partnership aims specifically to address the language and cultural inequalities that people who do not have English as a first language may face. It focuses on maintaining and extending Dundee College, the City Council and voluntary sector ESOL Outreach delivery across Dundee. This is done working with community partners, such as Dundee International Women’s centre. Provision is targeted at learners who are taking first steps into learning and is delivered in a community outreach model through a network of Community Centres; Schools and Voluntary Sector venues.
This partnership working aims to:

- increase language skills and employability and work towards gaining an SQA qualification indicators;
- promote skills to support applications for citizenship;
- Develop confidence to progress to other learning/community opportunities; and
- Reduce isolation and increase participation in wider society.

**College Regionalisation**

Dundee as a city has strong ambitions for its citizens and the surrounding region that it serves. The highly ambitious waterfront development will transform the infrastructure of the city, bringing inward investment, tourism and jobs to the wider region. This transformation will require skills and education services in order to succeed. The merged Dundee and Angus College will contribute to that success and has significant ambitions for both the institution that will be created and the learners that it will serve.

Their contribution to the Dundee Partnership will continue and be enhanced as good practice in supporting schools, social work departments, NHS, and other community planning partners. The relationships and articulation routes with Dundee and Abertay Universities will be strengthened by enabling more students within the College to progress seamlessly to higher education programmes.

**Family Learning**

The Centre for Research on the Wider Benefits of Learning recorded that as the average learning increases, inequality decreases, and that learning has a crucial role to play in breaking cycles of deprivation - not just addressing inequality in income but also increasing participation in community and having a positive impact on family life. An intensive targeted approach to family learning at community level, funded by Education Scotland, is being piloted, as a model of prevention and early intervention. Using the data zone population figures data zone clusters in St Marys and Kirkton, where it identified the highest levels of families likely to have literacy difficulties. A small team of literacy workers have been offering a range of opportunities focussed on families from these specific data zones to come together and take part in activities which promote early literacies learning.

The main method used to contact and engage with families has been door knocking and community engagement. Literacy workers have knocked on doors and spoken to people on their doorsteps. They have also hosted a range of family learning events in the community. The project commenced in Oct 2012 and so far has engaged and worked with 43 families. Text messaging and social media has been used to stay in contact with families and to publicise events and activities. It is widely acknowledged that children’s educational and social success are significantly increased if they have parents who are engaged in learning and this work aims to increase early literacy opportunities leading to greater success on starting school. Early evidence is showing greater family interaction.

This work links to the early years prevention work highlighted in Outcome 3 and supports the development and capacity building role needed to assist parents as early educators as highlighted in the Being a Parent in Dundee Strategy.
Outcome 3 - Our children will be safe, healthy, achieving, nurtured, active, respected, responsible and included.

STRATEGIC CONTEXT

Dundee's priorities and progress for children and young people are driven forward and monitored by the Dundee partnership Children and Young People Strategic Theme group. The group's aims are based on the national Getting It Right For Every Child (GIRFEC) approach where we want to ensure "that every child and young person in Dundee is Safe, Healthy, Achieving, Nurtured, Active, Respected, Responsible and Included."

The most recent Scottish Index of Multiple Deprivation shows that Dundee has the joint 4th highest national share of deprived areas in Scotland and the city faces a number of challenges in promoting healthy child development. These include various health and welfare indicators that are worse than the national average, such as a high prevalence of parental alcohol and substance misuse, high levels of domestic violence, low numbers of children being breastfed, greater numbers of children on the Child Protection Register than the national average and significantly more than the national average of Looked After Children.

The Partnership has reviewed the evidence from the key performance indicators from the SOA and Integrated Children's Services Plan 2010 - 2012 and started to shape the new Integrated Children's Services Plan.

Priorities have been influenced and shaped by the needs and aspirations of individuals and their communities. The Partnership recognises that in order to more effectively improve the lives of children, young people and families, our strategic focus must:

- give support earlier rather than leaving it until a crisis;
- promote the role and involvement of families and communities;
- give all children the best possible start in life even before they are born; and
- ensure our services are the best they can be.

In addition there are a number of key outcomes which are prioritised within the Integrated Children's Services approach and these include:

- keeping people safe;
- improving achievement for all children;
- tackling problems caused by drugs and alcohol; and
- promoting healthy living and physical activity.

In delivering the priorities and outcomes the Partnership are actively engaged across the integrated children's services spectrum. This includes work on the Getting It Right For Every Child (GIRFEC) agenda, the Early Years Framework, the Early Years Collaborative and Corporate Parenting. All of these areas of work have National and local contexts and the Partnership is actively engaged with colleagues across Local Authority boundaries with the establishment of the Tayside GIRFEC Group.

The Partnership priorities highlight a continued, significant and ultimately ‘game changing’ investment in children, young people’s and family services and reflect a major targeting of resources from across Council Departments, health, voluntary and community sector services.
In order to achieve the aims the Partnership will rely on a continued commitment to strengthening links across services and establishing a clear agenda for change and development supported by all key partners.

**Dundee Outcome 3 - Our children will be safe, healthy, achieving, nurtured, active, respected, responsible and included.**

**Intermediate Outcomes**

3a) Children are protected from abuse, neglect, exploitation and harm by others at home, at school and in the community.

3b) Children have the highest attainable standards of physical and mental health, access to suitable healthcare, and support in learning to make healthy and safe choices.

3c) Children have raised attainment and achievement and are supported and guided in their learning and in the development of their skills, confidence and self-esteem at home, at school and in the community.

3d) Children have a nurturing place to live, in a family setting with additional help if needed or, where this is not possible, in a suitable care setting.

3e) Children have opportunities to take part in activities such as play, recreation and sport which contribute to healthy growth and development, at home, at school and in the community.

3f) Children are involved in decisions that affect them and have their voices heard.

3g) Children take a responsible role in their schools and communities.

3h) Children have help to overcome social, educational, physical and economic inequalities and are accepted as part of the community in which they live and learn.

Improving our Partnership and Performance

The 2011 review of Dundee’s Integrated Children’s Services Plan evidences good progress with around 95% of activity and actions showing positive results. The overall direction of travel is good, but we are not resting there.

We have expanded the number of indicators with the aim of better identifying progress in what is a very complex and ever changing area of work. We have set out what we believe to be aspirational and challenging targets to drive forward our performance and improve outcomes for children and families. All indicators are mirrored in our Integrated Children’s Services Delivery Plan.

The additional indicators help to provide a more comprehensive picture of what the Partnership is striving towards and are based on the SHANARRI indicators. In addition to capturing health improvements we are also keen to ‘close the gap’ in relation to the outcomes for children who are looked after.

As an illustration of the Partnerships more integrated approach, the new indicator relating to domestic abuse is based on responding to high risk victims of domestic abuse; including children in the affected family. The focus of multi-agency risk assessment conferences (MARAC) is to improve the safety of victims and children so that they are safe from neglect, safe at home and protected from anti-social / criminal activity.

The education tariff score indicator has been used since the start of the SOA process and has risen steadily over the previous four years due to a concentrated effort by schools. This, along with more focused personalised curricular provision for all pupils, are the main reasons for the noted increase.

Early and Effective Intervention

Early and effective intervention is very important in addressing the health, economic and social inequalities affecting children and families and by that we do not just mean work in the early years. There are other key transitional points in children and families lives where the right support at the right time can help prevent long term problems.

A crucial part however is building parenting capacity and parental responsibility and this parenting role is being developed within the Early Years Framework. This is also being reinforced through the Partnerships multi-agency parenting strategy; Being A Parent in Dundee. This has four key strands; promoting parental responsibilities, prevention and engagement, community supports, and a focus on organisational success.

The Partnership acknowledges that early intervention is and should be a key priority in all our strategies but also recognise that prevention is better.

From a national perspective, the Partnership is embracing and implementing preventative models and in particular the national ‘Early Years Learning Collaborative’ approach (EYC). The EYC has established three workstreams aimed at; reducing infant mortality from conception to 1 year, improving the developmental milestones expected for children 27 to 30 months and improving the developmental skills and abilities for children at the start of primary school.
These ‘stretch aims’ are helping the Partnership and the EYC set the bedrock for a prevention and early intervention strategy. To help the EYC achieve its goals we have established a multi-agency infrastructure across the broad spectrum of services to children, their families and the communities in which they live.

The EYC is at a very early stage but it has already started to develop a broad range of collaborative interventions some of which are very preventative focussed. By using a ‘test of change’ model the EYC is exploring and evidencing what works across each of the three workstreams. This includes enhancing parenting skill through initiatives such as ‘PEEP’ (Parents Early Education Partnership), ‘Bookbug’ which promotes parenting skills by bringing parents and children together to explore the world of reading and ‘Mellow Bumps’ which introduces mums-to-be to baby brain development and the social capacities of their babies from birth.

From a local perspective, the Partnership is using an asset-based approach and has established the ‘Lochee Ward Early Years Pathfinder’. This is a locality based model of Integrated Children’s Services using the GIRFEC approach. The experience and learning will be disseminated and where appropriate rolled out across the city. The ‘Pathfinder’ involves all agencies and practitioners in the development and delivery of services for pre-birth to children up to five years to better co-ordinate and deploy services where they are most needed. Early years indicators will be used as a means to aid self-evaluation and measure outcomes and impact on the child and family.

An example of how the Partnership and the Lochee Pathfinder is bringing the national and local approaches together in order to provide a preventative service is through the establishment of the ‘Early Start’ team. The aim is to provide information/advice/support for families as early as possible, help families access resources/services in their community and reduce duplication across agencies and for families.

Other themes within the SOA will specifically address how our city is tackling family economic issues but it needs to be stressed that together we have to intervene effectively to support families and communities who are unemployed and rely on welfare benefits.

By increasing welfare employment opportunities for adults in families we will raise self-esteem and improve self-image and start the process of making people feel more equal.

Much of the work of the Partnership is impacted by child poverty. Many families in Dundee either can not or choose not, to access services and opportunities available. The Partnership recently undertook an exercise to better describe what needs to be in place to assist families to make those choices which reduce inequality and shift focus to prevention and early intervention. Some of the key areas are:

- review school charging policies for school trips and extra curricular activities;
- maximise take up of free school meals and uniform grants;
- establish a new social enterprise for childcare to increase availability of childcare and access to childcare employment; and
- develop community based, high quality day-care for under-threes in co-located venues where other community supported activities can be received, e.g. parenting support, adult education etc.

**Partnership Working**

The Partnership has made significant progress in engagement and collaboration with children, young people, their families and the communities in which they live. The approach is
embedded in the Partnership’s strategic developments such as the Integrated Children’s Services Plan, Opportunities For All (MCMC), and Lochee Ward Early Years Pathfinder.

All these developments are firmly based on issues identified by children, young people, and their families. By bringing both public and practitioners together the Partnership has started to develop solutions based on a better understanding of what is important to communities. By doing so the Partnership is achieving a better insight as to how communities themselves can bring their skills, knowledge, experience and resources to address issues important to them.

To complement the Partnership’s strategic approach, we are also committed to establishing and maintaining structures that actively listen to children, young people and their families. The city has established a **Looked After Children Champions Board** where the agenda is set by the young people themselves. The Champions Board is chaired by Dundee City Council’s Chief Executive and is made up of Senior Officers, Practitioners, and Elected Members. The Board’s aim is to deliver better support and services for looked after children across the city. The Champions Board recently won a COSLA silver award and has been shortlisted for a Scottish Social Services Care Accolade.

A good illustration of how the Partnership works closely with the voluntary sector is through an exciting initiative funded by the Big Lottery ‘Improving Futures Fund’. This has seen **Barnardos, Children 1st, Aberlour and Action for Children** join with the local Voluntary sector, Dundee City Council and NHS Tayside to establish an Early Intervention Team to offer preventative support for families on the edge of crisis. This is ground-breaking in the sense that it brings four of the big national voluntary organisations together physically to deliver a joint local service.

The Partnership is building stronger links and working collaboratively with **Angus and Perth & Kinross Councils** to develop Tayside-wide solutions where appropriate. Initiatives include workforce development in relation to the Named Person and Lead Professional, design of a single assessment framework, explore strategic commissioning opportunities and roll out learning from the work of Who Cares? with the Looked After Children’s Champions Board.

Whilst we have very strong commitment from our public and third sector partners we are at the early stages of involving the private sector. Through our youth employment programme ‘Opportunities for All’ we have developed good working relationships with local employers including B & Q, hairdressers, garages and beauty salons. Our Early Years colleagues have very strong working relationships with the private nursery and child-minding sectors across the city.

**Getting It Right For Every Child (GIRFEC)**

GIRFEC implementation is well underway. Work is well advanced towards the implementation of an Integrated Assessment Framework (IAF) based on the GIRFEC principles.

The implementation plan is guiding progress towards the adoption of the IAF across the ICS partnership. The Single Assessment and Child’s Plan has been fully implemented within Children’s Services in the Social Work Department.

The next stage of implementation is to continue discussions with principal partners regarding fully adopting the IAF format. This will ensure a seamless information gathering, assessment and planning process that has the long term aim of making a decisive shift to early intervention through co-production with partner agencies.

We are clearly embedding GIRFEC across the wide range of Integrated Children’s Services business and that includes Child Protection. A great deal of work has taken place on the development of Child Protection Services and the roll out a new and more robust system for self-evaluation is now underway. This includes multi-agency, case-based self-evaluation which
looks at what outcomes are being achieved for children and young people and examine the impact that services have on their lives.

GIRFEC is obviously concerned with all children and the communities in which they live and over a number of years we have been developing an approach which is both targeted and universal.

Within our targeted support we are currently improving our Team Around The Child (TATC) concept by developing a clearer referral and support pathways. A crucial addition has been the introduction of Local Learning Partnerships (LLP’s) whose focus is on coordinating local services to meet identified local learning needs such as family learning, evening and weekend opportunities, and employment and training opportunities for young people. Closer links are being developed between the TATC and the LLP to ensure that any individual needs being identified are informing the community provision.

This development will also enhance the existing transition pathway for school leavers and ensure that all young people who require it are offered support through Activity Agreements. Young people are provided with a key worker and a personalised programme of learning and activity to help them move into employment, further education or training.

Next Steps

Ongoing challenges are predominantly around the bedrock of the ‘Getting It Right’ approach where there is a need to instigate and support culture, systems and practice change. Our services will be best delivered via the establishment of a joint strategic commissioning strategy This will support the overall integration agenda which more and more will consider opportunities for shared resources and budgets across children’s services. We are currently working on a new delivery framework and operational structure for our Integrated Children’s Services approach which will see the auctioning of key priorities and outcomes articulated within this Single Outcome Agreement.
Outcome 4 - People in Dundee will have improved physical health and mental well-being and will experience fewer health inequalities.

STRATEGIC CONTEXT

Poor health associated with relative poverty is the most severe form of inequality in society (NHS Tayside, Health Equity Strategy 2009). The Ministerial Report on Health Inequalities in Scotland, Equally Well, highlights that although overall health is improving in Scotland it is not improving fast enough for those living in the poorest areas of our society and states that health inequalities remain our biggest challenge. This is not only true at a Scotland wide level, but is very much a local issue. Reducing health inequalities within Dundee is crucial if we hope to achieve the wider outcomes described within this Single Outcome Agreement. Dundee’s economic, educational and social successes are dependant on the health of those who live within the city. Achieving equality of health outcomes will contribute significantly towards achieving a “Fair” city, where all of our population is able to both contribute towards success and benefit from it.

There is a growing evidence base, at National and local level, for both the existence of and the impact of health inequalities in our city. Data is being produced at a more local level and in a more timely fashion to allow us to identify areas of poorer performance and to see evidence of the impact of interventions on that performance. Data must however be considered with caution as often relatively small changes in numbers can have seemingly significant impacts on the performance measure, for example with reference to suicide numbers in small areas. In addition it is recognised that because of the multifactorial nature of health outcomes, it can prove difficult to draw direct causal links between interventions and outcomes, so when interpreting any change in performance we must consider wider societal influences as well as the impact of statutory interventions.

Within Dundee there is wide variation between the life expectancy of those living in more deprived areas and those living in the less deprived areas. Life expectancy for men living in some of the most deprived areas is almost 11 years less than those living in the less deprived, and female life expectancy varies by as much as 11 and a half years.

Not only is life expectancy lower but people living in more deprived areas suffer more from life limiting illness than those living in less deprived areas. Cancer registrations in some of the most deprived areas are more than double those seen in more affluent areas, those living in the most deprived areas are 3 times more likely to be hospitalised for Asthma, 3 times more likely to die early (under 75) from Coronary Heart Disease, twice as likely to be hospitalised as an emergency, twice as likely to die from alcohol related diseases and up to 10 times more likely to be hospitalised with COPD than those living in the least deprived areas. (ScotPHO, Community Health Profiles 2010).

The health of the people of Scotland, and of people in Dundee is generally improving. However, there remain a number of challenges nationally and at a local level to this continued improvement.

It is well-documented that Dundee has some of the worst performance in terms of health indicators in Scotland. (ScotPHO, Community Health Profiles 2010). Men in Dundee have a significantly lower life expectancy than the Scottish average as well as significantly higher early deaths from cancer, deaths attributable to smoking, deaths from alcohol, deaths from suicide, hospital admissions for COPD, CHD, Cerebrovascular conditions, prescribing rates for anxiety/depression/psychosis and a significantly higher prevalence of diabetes across the population. Therefore, as well as creating health equity, we also aim to improve the overall physical and mental wellbeing of people living in Dundee. It should be noted that according to the Community Health Profiles Dundee no longer has a statistically significantly different smoking rate to the rest of Scotland. Other sources suggest that while Dundee
continues to have high rates of smoking, there are wide variations in rates of smoking between the more deprived and less deprived areas of the city.

**Dundee Outcome 4 - People in Dundee will have improved physical health and mental well-being and will experience fewer health inequalities.**

**Intermediate Outcomes**

4a) People living in community regeneration areas have improved health.

4b) Our young people engage in less risk-taking behaviour.

4c) We have reduced rate of teenage conception in community regeneration areas.

4d) People have more healthy and active lifestyles

4e) People have better mental health and well-being

4f) We have reduced harm associated with substance misuse to individuals, families and communities

4g) An increased number of people are progressing in their recovery from substance misuse.

### IMPROVING OUR PARTNERSHIP AND PERFORMANCE

The Partnership recognises that health services play an important part in **improving physical and mental wellbeing** but that there are **other socio-economic factors** which have an as important or even more important role to play. Individual lifestyle choices impact on the health of the individual and the wider community. These choices and associated health behaviour changes are directly affected by the environment in which the individual lives, the economic situation of the individual, the educational and learning environment of the individual and family, their housing situation and other factors which can only be tackled on a Partnership basis.

Healthy Dundee provides the Partnership platform for these multi-factorial issues to be considered in a wide partnership basis and has developed and supported a number of key multi-agency approaches to health improvement, some of which are described below. Although Healthy Dundee is the lead group for improving health, it recognises and supports the role other partnership groups play in terms of this important agenda. The significant role that Leisure and Culture Dundee can make to improve mental and physical health is acknowledged and Leisure and Culture Dundee will therefore become a member of Healthy Dundee in order to improve links and co-ordination. The lack of physical activity indicators in this SOA is recognised and discussions to develop community level indicators for the next SOA is a priority.

A recent review of Healthy Dundee has identified a number of key groups who are responsible for delivering or contributing towards identified SOA outcomes. A reporting schedule for these groups has been developed to ensure robust monitoring and review of key pieces of work.

The **crucial role played by the third sector** in improving health and reducing health inequalities, is recognised and valued by the Partnership. Responsibility for Section 16 grants which historically have been administered and governed by NHS Tayside have now been devolved to the Community Health Partnership and work is ongoing to ensure this fund is more closely aligned to the planning processes and priorities of the Partnership.

To assist locality planning we are continuing to develop our **local community profiles** which not only give detailed information regarding the health profiles of the Local Community Planning Areas but allow us to compare areas and identify areas for prioritisation. The profiles will support local communities to identify health outcomes of importance to their communities and will provide a focus for the identification of health priorities through the local community planning process.

We have established **Health and Wellbeing networks** in the Local Community Planning Areas which contain the most deprived areas in Dundee. These networks will facilitate discussion with local communities and assist those local communities to address identified issues.

Dundee’s first Local **Care Centre (LCC)** is to be established in Whitfield, one of the more disadvantaged areas of the city. The Whitfield LCC is a collaborative project between NHS Tayside and Dundee City Council as part of the local authority’s urban regeneration and school replacement programme. The aim of LCCs is to progress joint working, co-location and targeted service delivery in the heart of local communities. It will reflect the needs, experiences and choices of all service users in the community, whether patients or carers, as well as the...
specialist needs of social work, clinical and non-clinical staff in Dundee. Further opportunities for development of LCCs will continue to be explored, particularly in Lochee.

We are now tackling what were traditional “health improvement” issues in a much more holistic way, rather than simply using a topic based approach. For example, our smoking cessation services are integrated with the work of Dundee Healthy Living Initiative, and direct smoking cessation services are being delivered on a partnership basis – including pharmacy support, incentive provision by the private sector, public health and Dundee City Council. The evaluation report of our locally developed “Quit4u” programme was launched in May 2012, and shows evidence of improved engagement with more deprived communities and quit rates which exceed the average of all other services/initiatives in Scotland. We will continue to explore how incentives can be used as a health improvement aid.

The ongoing integration of Adult Health and Social Care services will assist us to work together jointly to improve health outcomes for our service users and their carers. As part of our commitment to greater and closer working between Dundee City Council and NHS Tayside, Dundee CHP management team have now been co-located with the City Council’s Social Work Department.

Tackling Inequalities

Healthy Dundee has agreed that tackling health inequalities is the top priority for the Partnership and has worked with NHS Tayside to develop a Health Equity Strategy for Tayside, the aim of which is to tackle health inequalities and bring about health equity in a generation. The Partnership has agreed that, in terms of implementation of the Health Equity Strategy, priorities should focus on 3 main actions which could achieve transformational change. These are:

- The development of social prescribing across the city based on the findings of the local pilot;
- Roll out and implementation of lessons learned from the Dundee Equally Well test site; and
- Enhancement and further roll out of the Dundee Healthy Living Initiative.

It has further been recognised that improving the lives of our population depends not solely on provision of good quality public services, but also on the resilience of our individuals and communities and the ability of those living in more deprived areas to be “co-producers”. (Making Better Places, Making Places Better, Colin Mair et al, The Improvement Service, 2011). It is only by working with local communities as partners in producing improved health outcomes rather than as passive recipients of services that we can make sustainable improvements to the health of our communities.

In 2008, Dundee made a successful proposal to host one of 8 national test sites sponsored by the Scottish Government as part of the implementation of Equally Well. Each test site focuses on a different Equally Well priority, and in Dundee, the aim was to work in a disadvantaged community to test new ways of working, predominantly in public services, to tackle health inequalities and improve community mental wellbeing. We are now rolling out the learning from this approach via a transitional model which has been awarded short term funding via NHS Tayside for implementation during 2013/14. The roll out of the transitional model will support services to adopt social prescribing approaches so that they assist their service users to access sources of support that address their broader needs and/or assist recovery.

The links between worklessness and ill health (both as a symptom and a causative factor) are well documented. The Employability Programme funds a range of specialist provision to help people address specific issues that prevent them from gaining and sustaining employment. With over 10,000 working age incapacity benefit claimants in the city, it is vital to provide
services which assist people to manage or overcome health related issues that may be affecting their employability prospects. Over 400 staff have been trained to embed consideration of client employability within their every day practice. The Working towards Health Project delivers an individualised programme that is designed to enable people to address and manage health conditions that have, or are proving to be, a barrier to participating in work, education or training. The programme is open to anyone with mild to moderate health conditions and is currently workless. The programme promotes an asset model approach, accentuating the positive capabilities clients have.

Prevention and Early Intervention

The Partnership recognises that one of the key ways to improve the health of the population of Dundee is to focus on prevention and early intervention. As well as increasing life expectancy, an aim of the Partnership is to increase healthy life expectancy and improving the quality of life for our increasingly elderly population. The major risk factors for the most common long-term conditions impacting on quality of life are lifestyle and behavioural choices made by the individual (often at a young age). In order to assist our communities to lead more healthy lifestyles we are taking a holistic approach to health behaviour change, recognising that risk taking behaviours are often a result of wider socio-economic factors.

Healthy Dundee is supporting the development of the Early Years Collaborative and in particular the Lochee Pathfinder Project.

The Health Buddies Sex and Relationships peer-education (SRE) pilot programme in schools has continued to develop has completed its second phase. The programme aims to develop and deliver peer led approaches to sexual health, relationships and well-being and is now operating in four secondary schools. The programme has received a number of awards and has attracted interest from around Scotland and from the Scottish Government. Health Buddies will combine with the peer-education project on drugs and alcohol to create a sustainable peer-education model that is integral to the delivery of the health and wellbeing elements of Curriculum for Excellence. This integrated approach will commence in all secondary schools from 2013/14.

The Web project delivers SRE programmes to offsite centres across the city. Staff development opportunities are available and work is currently ongoing to offer training on risk-taking behaviour through a multi-agency approach. The Speakeasy parenting programme has been commissioned to deliver an eight-week programme provides practical support and advice on positive parenting and aims to encourage and enable parents to talk to their children about relationships, sexual health and other risk-taking behaviours. The Speakeasy programme is promoted to school and community groups and will have a particular emphasis on supporting professionals working with Looked After and Accommodated Children and foster carers.

A free sexual health app - NeedTayKnow - was launched in February 2013 to provide young people with information and advice on sexual health and relationships and where to go for services and support.

All secondary schools have a generic health drop-in supported by a school nurse and a health promotion officer operating weekly. LINC; a dedicated young people’s specialist sexual health clinic runs on two evenings at Ninewells Hospital and is a collaboration between the Specialist Sexual & Reproductive Health Service and The Corner. Following research conducted with young people on contraceptive use, a review of condom distribution has been completed and its recommendations will be implemented in 2013/14.

The Partnership supports the ongoing work of Keep Well, aimed at delivering anticipatory health checks to those falling within a targeted population, and its integration with “Hearty Lives”, previously funded through the British Heart Foundation. Under the umbrella of Keep
Well we are further integrating this work with mainstream services, ensuring sustainability and maximising the sharing of learning from this valuable work. Results suggest that a range of medical interventions, ongoing support and lifestyle changes such as weight loss are having an impact. Keep Well may be contributing to the considerable reductions being seen in admissions to hospital where Coronary Heart Disease is identified as the main diagnosis. There has been a similar decrease in the number of occupied bed days where Coronary Heart Disease is the main diagnosis. The Dundee CHP profiles published by Scottish Public Health Observatory report a decrease in the rate of early deaths from Coronary Heart Disease from 87.5 per 100,000 population in 2008 to 64.4 per 100,000 population in 2010.

Active Families (a partnership between NHS Tayside, Leisure and Culture Dundee, and the British Heart Foundation) has been developed as part of Hearty Lives Dundee to contribute towards reducing childhood obesity. It is targeted at Dundee's regeneration areas and uses a family approach to promoting healthy lifestyles, with a focus on increasing physical activity and health eating. The programme is to be extended to create new opportunities for families to increase their levels of physical activity and knowledge of eating better, across Dundee. The extended programme will target less complex families and families who are not known to other professionals. In addition the extended programme will support the families with a range of supportive interventions along with focussing on volunteering. Funding is in place up to March 2014 and Healthy Dundee will help to support the review of and sustainability of this programme.

Leisure and Culture Dundee’s Sports Development Section provide an extensive programme of physical activity to children from pre-birth upwards, young people and adults within the community which all contribute towards healthy and active lifestyles. In addition, tailored programmes including “Street Soccer” which uses the power of football to engage with socially excluded groups such as homeless, unemployed, drug & alcohol abusers/mis-users, who are aged 16 to 60 years old; the "POST" Physical Activity programme – a 1:1 intervention to help reverse obesity levels in referred children; and the “Family Splash” the Lochee Pathfinder’s low cost referral programme into family physical activity; all have significant contributions to achieve better health outcomes through individuals making improved choices and positive behaviour changes towards healthier lifestyles. The development of affordable and accessible physical activity opportunities for families facing health inequalities in this city will be a focus for the next four years.

The Commonwealth Games offer a unique opportunity to capture people’s imagination and enthusiasm and the Partnership has a legacy plan which clearly communicates how to become involved in sport and physical activity in their local communities.

Funding in the region of £200,000 has been confirmed for Dundee Healthy Weight Community Programme (DHWCP). Responsibility for delivery of this programme has been reviewed and will now sit closer to Healthy Dundee. To date partnership discussions have taken place with Leisure and Culture Dundee, Sports Development, NHS Tayside Public Health, and the Dundee Healthy Living Initiative. New partnership working along with community based approached will be key features in implementing this healthy weight initiative.

DHWCP funding will cover a two year period of healthy weight development with support for targeted capacity building of relevant staff along with a strong community based focus.

A service Improvement Plan for implementation of “Improving Maternal and Infant Nutrition: A Framework For Action” (MIN) has been developed, with a number of specific workstreams. The Working Together workstream aims to improve and increase knowledge, skills confidence and attitudes of all those working with nutritionally vulnerable women of child bearing age and infants. Women prior to, during and after pregnancy will be supported to manage their weight through the Maternal Obesity workstream. The Healthy Start workstream will increase awareness and uptake of the Healthy Start scheme and access to healthy start vitamins. The infant feeding workstream will improve breastfeeding rates and the weaning and family foods
workstream aims to improve access to opportunities to develop practical food skills. Each of the workstreams has developed a set of outcome indicators to monitor progress.

Healthy Dundee is working with partners in the development of the new **Carer’s Strategy** for Dundee. It has recently been agreed that responsibility for allocation of Carer’s Information Strategy funding will be devolved from NHS Tayside to CHP level. This funding will be used alongside mainstream and Change Fund resources to develop services and supports for local carers to help them to continue in their caring role and to address the specific health needs of carers.

The Partnership has endorsed a **Regional Health & Transport Framework** which has been developed by Tactran, working with NHS Tayside. This aims to address the following key linkages between health and transport:

- promoting active travel as a means of improving physical and mental wellbeing as well as promoting more sustainable travel choices;
- addressing the undesirable public health effects of transport, such as poor air quality; and
- improving access to healthcare services and facilities and reducing inequalities within this.

The Partnership is progressing the development of a locally relevant Action Plan.
Outcome 5 - People in Dundee are able to live independently and access support when they need it.

STRATEGIC CONTEXT

The Dundee Partnership is fully committed to supporting people to live fulfilled and independent lives, safely in their communities and reducing the need for people to be cared for in congregate settings. Our commitment is to provide information, advice, services and support people to achieve improved personal outcomes.

Strategic and intermediate outcomes have been developed to assist us to meet statutory obligations, prioritise resources and ultimately, to improve how we deliver services to **optimise personal outcomes for people**.

In delivering this commitment we recognise that we face particular challenges. For example, we know that around 40,000 of our citizens live in the 15% most deprived areas in Scotland and, as the Christie Commission reported, 32% of adults in these areas are likely to have a long-standing illness (compared to only 14% in more affluent areas).

Also, the proportion of our population over 85 years is expected to almost double within the next 20 years. We know that an **ageing population and the effects of deprivation** combine to increase demands on health and social care services. People are living longer with increased ill-health and frailty and people in areas of multiple deprivation are likely to experience the long term conditions associated with ageing at an earlier stage.

As the number of older people increases the number of **people living with dementia** will also increase. There has been a recent drive to ensure that dementia is diagnosed and work in underway to reduce variation across the city. As more people are diagnosed, preventative services can be offered which help people to live independent and healthier lives for longer.

The range of specialist services in the community which meet the needs of older people with advanced dementia is improving and carers are being supported to prevent crisis situations which result in emergency respite in care homes.

**Unpaid carers** are key partners in the delivery of health and social care across the city. As a result of demographic and social changes, this role will become increasingly relied upon at a time when carers are also ageing and also require services and support.

Our service users and their families and carers expect higher quality and more choice than previously. We know that people increasingly expect the same variety, choice and flexibility that they receive from the business sector.

Our immediate outcomes and indicators of performance are organised under four themes – Reshaping Care for Older People (Change Fund for Older People), Personalisation, Carers and Protection. These themes follow the national policy framework and contextualise it to our local circumstances.

Reshaping Care for Older People

The Reshaping Care for Older People Programme, funded by the Older People’s Change Fund, is an integrated and comprehensive whole systems framework. We have explained how the Reshaping Care Programme (Change Fund) will be taken forward in the Dundee Joint Strategic and Commissioning Statement for Older People which is underpinned by strong local authority, health, voluntary and private sector partnerships. The framework emphasises a requirement to invest in anticipatory and preventative approaches that will help manage demand for formal care; work closer with the third sector; develop community capacity and support carers. In order to achieve this we will continue to provide intensive (ten hours or more per week) homecare. In order to meet the demand which is anticipated to shift from the acute
sector and as a consequence of demographic change, we will increase the number of people receiving Intensive Homecare by 5% and Enablement by 15% each year until 2017. We want to reduce unnecessary unscheduled hospital admissions and we have committed to reducing the emergency episodes and bed days for people aged over 65% by 2% each year until 2017. It is recognised that this is a challenging task as demographic, social and economic changes mean that we now need to provide more with less resources.

In order for this to be achieved people, who use our services and their carers need to be partners in care planning and in control of their futures. To this end, over 200 older people were involved in the development of the Joint Strategic and Commissioning Statement for Older People. We will continue to revise, through consultative processes, how we provide services to encourage more choice and control.

The development of the Change Fund Plan for Older People has facilitated an opportunity to test and review a number of changes. Our revised models of care are much more outcome focussed, integrated and collaborative with a much stronger emphasis on anticipatory care, early intervention and rehabilitation.

Our voluntary and private sector partners have a greater role than ever before and we have worked with them to deliver Stirling University Best Practice Dementia Training in Care Homes and will roll this out to Care at Home Providers.

The Dundee Celebrate Age Network (CAN) was tasked through the Change Plan to develop an older people’s information resource. Working in partnership with the Dundee Independent Advocacy Service (DIAS), CAN has developed an Older People’s Helpline (DIAL OP) which is manned by older people. This service was launched this month and is being widely advertised on local buses. DIAL OP builds on the CAN directory of services which is maintained through their web site and is supported by the CAN FIC’s project where older people will visit others at home to provide information and sign post to services. The DIAL OP service will not only support older people requiring general advice but we see this service providing a means of targeted information for other work streams. One example of this relates to the issue of falling, where the CAN has mapped into a database all the exercise classes within Dundee and will sign post individuals to activities provided locally through DIAL OP.

The allocation of a Community Capacity Development Fund to Dundee Voluntary Gateway has resulted in a range of new project developments. During 2012 the following projects were initiated:

- The development of a Dementia Community Cafe within a Housing Association. The cafe enables tenants affected by dementia and their carers to meet and share experiences and provide mutual support;

- The introduction of an Activities Co-ordinator across a range of housing complexes that will increase the range of activities available and increase tenant capacity to self support these activities;

- The piloting of a community transport project in one area of Dundee;

- Further development of a local home help scheme by a voluntary agency;

- A review of the range of household maintenance schemes within Dundee, to identify the barriers and potential risks older householders face when attempting to maintain their homes;

- Appointment of a development worker to establish a dementia choir and to network with local established choirs to facilitate the participation of older people with dementia; and
Development of an engagement training programme for people who have a life long deafness and which supports their participation in key older people groups.

In addition, this year the Gateway will progress a work stream focusing on combating isolation among older people. The Gateway will work with the voluntary sector to develop and test a range of models tailored to individual community requirements.

Personalisation

Rather than doing things ‘to’ or ‘for’ people, we are working ‘with’ people to support them to regain and retain the skills and motivation needed to achieve independent lives and to support them to direct the support that they may need to achieve this.

We currently offer Direct Payments to those able and willing to manage their own care. This offers greater choice and flexibility and empowerment. We are further developing our policies to extend the options available to people, in line with the proposals in the Social Care (Self Directed Support) Bill (Scotland). We anticipate an increase in the number of people directly controlling their care arrangements over the next five years. In order to fully understand our activity in relation to personalisation we will measure the number of people receiving Direct Payments alongside the activity relating to the additional self direct support options offered.

These options will also be offered to carers who are in need of service and support.

Carers

Unpaid carers are key partners in the delivery of the health and social care across the city. This invaluable role will become more important as a result of demographic and social changes. In order to sustain carers we need to provide support and services, as well as breaks from caring to enable them to enjoy a quality of life out with their caring role.

We are committed to improving how we support carers and we will work towards recommendations from the National Carers Strategy 2010-15. We recognise that carers need to be partners across all levels of service delivery and when they need support it will be flexible and meet their needs.

One of the many ways to support carers is to provide short breaks to people. While we strive to measure outcomes for carers and improve the support they receive, we have begun by measuring the provision of respite as a proxy measure of how we support carers. Carers’ representative organisations have been full partners in the development of the Change Plan for Older People which has resulted in a number of new respite and support options. We will continue to increase the number of respite weeks provided and we will continue to apply anticipatory approaches to reduce the amount of emergency respite required. These measures will be monitored and reviewed as more meaningful baseline data is developed.

Protection

Unfortunately, there are people living in our communities who are at risk from harm. We have a statutory obligation under the Adult Support and Protection (Scotland) Act 2007 to protect people and keep them safe. Our multi agency structures and processes are focussed on making people safer by creating a more informed public, investigating concerns and putting measures in place quickly to increase safety. We have been closely monitoring our activity and know that increased activity is a direct result of improved professional and public awareness and by 2017 we expect this activity to have increased by at least 100%.
**Dundee Outcome 5 - People in Dundee are able to live independently and access support when they need it.**

**Intermediate Outcomes**

6a) People who receive care and treatment services achieve positive personal outcomes.

6b) Carers are supported in their caring role whilst having a life of their own and have their caring role acknowledged.

6c) Older people and other adults access timely and appropriate preventative, enabling and rehabilitative treatment and support.

6d) Older people and other adults receive care, treatment and support in community settings as opposed to long stay care settings.

6e) Older people and other adults are protected from harm.

**IMPROVING OUR PARTNERSHIP AND PERFORMANCE**

Our commitment to promote independence, to support people to take greater control over their lives and to ensure that they can access support when they need it is shared by Community Partners. Shared objectives, visions and values with health, private and voluntary sectors have been identified and fed into Strategic Commissioning Plans. The public has been consulted with and it is recognised that these plans will improve personal outcomes for people by reducing unnecessary unscheduled admissions, reduce length of stay in hospital when admissions are appropriate and support people to live safely in homely settings.

We recognise that our internal infrastructure must change to achieve this and we are already aligning budgets, co-locating workers, developing joint teams and aligning management teams. We have been able to use this as an opportunity to strengthen our partnership working with the private and voluntary sectors as demonstrated by our jointly produced and monitored Change Fund Plan for Older People.
The planned integration of Social Work Services for adults with Dundee’s Community Health Partnership will improve efficiencies, share costs, reduce duplication and in doing so will support us to deliver improved outcomes.

We are using local intelligence to guide these changes and improvements, for example the Dundee Integrated Resource Framework (IRF) is part of a national project to identify variations in spend across localities to allow us to reduce waste, promote equalities in how we provide services and improve outcomes for people.

Social and health inequalities currently exist across the city. We will continue to respond to those in need of services and at the same time target the underlying causes of these inequalities.

Our aim as part of Reshaping Care for Older People is to build the capacity of communities to deliver services which maintain people in their own home in response to identified community need. We wish to enable the public to make informed choices about support which maximises public independence and minimises the need for statutory intervention. This will include the development and promotion of co-production models, volunteering and commissioned services through social enterprise and will also address the community needs of local communities and/or communities of interest.

We will change the way we deliver services and offer more anticipatory and preventative support to educate people in self managing their conditions. Rehabilitative support will be provided to those recovering, to ensure they regain their independence and confidence fully to prevent further escalating health needs.

Priorities for Improvement

We have reviewed our performance against the areas for improvement identified by the Best Value 2 Pathfinder Audit

Governance

- The Community Adult Services Management Team is responsible for delivery of this SOA Outcome;

- The Community Adult Services Management Team reports to the Dundee Partnership Management Group;

- Strategic Planning Groups for each service areas report to the Community Adult Services Management Team.

Partnership working and community leadership

- Joint health and social care management team working arrangements have been reviewed;

- Chief Officer Group – Protection. The Dundee Partnership is taking an integrated approach to Protecting People. Monitoring amongst other things, the work of the Adult Support and Protection Committee;

- Adult Support and Protection Outcomes and Performance Framework has been developed to support and inform the Adult Support and Protection Committee;
• Integrated Change Fund Plan for Older People has a supporting Outcomes and Performance Framework to evidence improvement and identify areas for development; and

• Development of a Joint Strategic and Commissioning Statement for Older People.

**Community Engagement**

• The Dundee Integrated Resource Framework (IRF) is part of a national project to identify variations in spend across localities to allow us to reduce waste, promote equalities in how we provide services and improve outcomes for people. It will help us to identify how we can most efficiently use joint resources to meet the needs of the most disadvantaged communities and communities of interest.

**Use of Resources**

• The Health and Social Care Partnership, through the Community Adult Services Management Team jointly manages the total resource;

• Joint Commissioning Frameworks for adult services – 10 year plans are in place or are under review; and

• Change Fund Plan for Older People is a 5 year partnership plan. The aim of one of the 11 programmes is to consider how changes to the management of our assets (staff, building, systems and budgets) might be better aligned to provide a more efficient and seamless service to individuals and their carers. This is a critical support to the development of our strategic approach to integration in Dundee, as expressed through the Dundee Integrated Care Model for Older People.
Outcome 6 - Our communities will be safe and feel safe.

STRATEGIC CONTEXT

The Dundee Partnership has statistical evidence to show that Dundee is currently a city where crime, risks from fire, dangers on the road and fear of crime is reducing. Over the last 5 years crime levels in almost all major crime groups and other community safety indicators are showing a downward trend. For example:

- Violent Crimes have reduced by 16.8%
- Robberies have reduced by 36.3%
- Vandalism has reduced by 37.8%
- House break-ins have reduced by 40.5%
- Number of people reconvicted annually has fallen by 28%
- Youths causing annoyance calls have reduced by 55.5%
- The number of fatalities arising from fires has reduced by 50%
- The number of dwelling fires has been reduced by 17.2%

The statistics show that overall the victims of crime are more likely to live in community regeneration areas than anywhere else in the city. The Dundee Community Safety Partnership (CSP) responded to this by commissioning the former Tayside Police (now Police Scotland) Community Investigation Unit to develop targeted approaches in the regeneration areas of Lochee, Stobswell and the Hilltown, and to contribute a policing response to help local community planning partnerships and communities achieve community safety objectives within local community plans.

In addition, the Police Public Perception Survey showed reductions in the fear of crime with the percentage of those interviewed who felt either safe or very safe in their communities rising in 2011/12 from 80.7 to 85.5%.

The most recently available figures show that, in 2009-10, 76% of people who were convicted in Dundee had previous convictions. Reoffending creates victims, damages communities and wastes potential. If we are to have safer and stronger communities we need to minimise reoffending, supporting people to pay back constructively for their crimes and build better lives for themselves, their families, and their communities.

Tayside Community Justice Authority (CJA) has worked with partners, including Dundee City Council’s Criminal Justice Social Work (CJSW) service and the Scottish Prison Service (SPS), to identify a number of strategic objectives for reducing reoffending in the region. These include reducing reoffending by short-term prisoners by improving their access to housing, employability, health and substance misuse services; implementation of the new Community Payback Order (CPO); reducing the reoffending of young offenders by increasing diversion opportunities and implementing the ‘Whole Systems Approach’; increasing the percentage of domestic abuse perpetrators who access specific perpetrator programmes; reducing the number of persistent offenders through the provision of services targeting their specific needs.

Dundee CJSW has liaised with communities and partners to increase referrals for unpaid work projects to be undertaken, benefiting communities and supporting offenders’ reparation to those communities. Sports Fund Projects have taken advantage of additional resources made
available by the Scottish Government to develop and improve local sports facilities and provision to good effect. A Pilot project is underway, involving Dundee CJSW and SPS working in partnership, to provide through care services for Prisoners returning to Dundee communities, ensuring that they have the services required to best reduce their risk of re-offending.

The number of Dundee citizens in custody on 30 June 2011 was 458 - an imprisonment rate of 377 per 100,000 of the population. The Involvement of the Scottish Prison Service at key community safety meetings will enhance the links to early intervention right through to reducing re-offending. This is in addition to partnership approaches with Social Work, third sector partners and the Tayside CJA.

Alcohol and Drug misuse plays a significant part in crimes and offences committed in Dundee in 2012-13.

In 2012-2013 there were 105 crimes recorded in Dundee within Groups 1 and 2 crimes categories where being under the influence of Alcohol was recorded as a factor for either the victim or the offender. This is approximately 25% of the total.

Group 1 category covers Serious and Violent crime and Group 2 are crimes of a sexual nature. In 2012 – 2013 there were 1102 drug related offences in Dundee where persons were found in possession of illegal drugs.

Key partner agencies work together to promote a strategic approach to road safety Education, Enforcement, Engineering and Encouragement within the city. The work undertaken particularly within our schools as well as the use of the hard hitting ‘Safe Drive Stay Alive’ road safety initiative, targeting pupils and students who are of the age where they are just about to start to learn to drive, has been instrumental in contributing to a significant reduction in road traffic collisions encountered and a reduction in the number of those killed.

Statistically, road fatality numbers are low and, therefore, a change of one or two causes a significant percentage change. On average over the last five years there have been 3 people killed per year. This figure includes one child who was killed on the roads during the last 5 years - which is still one child too many. Statistics for serious injuries in Road Traffic collisions show a five year average of 51 casualties per year. This number has fluctuated over the last five years. We are targeting a further reduction. Overall the numbers of Road Traffic Collisions continue to fall year on year. A significant contribution to the improved levels of Community Safety over the last 5 years is the good partnership working between Dundee City Council, Police Scotland, Tayside Fire and Rescue, the NHS and a number of other key partner agencies from the community and voluntary sector. Good quality community intelligence has enabled partners to identify and deal with community safety issues across the City. A high performing Community Safety Partnership and an approach focussed on prevention and early intervention has been the key to Dundee's success. To build on this solid foundation of partnership working Dundee City Council has co-located Community Safety Services this year within one Hub in Dundee.

As with all outcomes across the Partnership, the economic recession, welfare reform and the potential impact on deprivation may present a number of challenges to the Dundee Community Safety partnership.

The Dundee Community Safety Partnership (DCSP) was one of the first CSPs in Scotland to develop a community intelligence led approach to the development of its Community Safety Partnership Strategy and Action Plan. The CSP has a firm understanding of place through its Strategic Assessment. This document was created by the CSP Community Intelligence Analysts, funded as part of the Service Level Agreement between Dundee City Council and Police Scotland. Future such Strategic Assessments will reflect our new priorities under the terms of this document.
The Community Safety Partnerships first Strategic Assessment was contributed to by 22 partners from the Community Safety Partnership.

We were aware of, and considered, various developing methodologies for prioritising the issues raised in the DCSP Strategic Assessment however we felt that none of them were robust or transparent enough to direct the activity of the DCSP.

We therefore took overall consideration of crime and incident / subject trends, and combined it with horizon scanning to identify any emerging issues. In addition we took into consideration Policing, CSP partner and Scottish Government priorities to set the priorities for DCSP.

Using this evidence based approach the main priorities for the CSP are:

**Priorities**

- The impact of crime on individuals, communities and businesses - which we are tackling by the introduction of innovative processes such as our Repeat Caller process;

- Domestic Abuse – which we will tackle by collectively identifying and supporting victims and targeting offenders.

- Tackle re-offending through the timely provision of appropriate services to Offenders at different stages of the criminal justice system, from early and effective intervention through to diversion from prosecution, community sentences, resettlement from short-term prison sentences and statutory through care for prisoners serving over 4 years

- Anti-social behaviour - which we are tackling through more effective partnership working enhanced by the co-location of partners within the new Community Safety Hub;

- Youth Disorder - which we are tackling through our support for diversionary youth provision and holiday diversionary programmes;

- Violent Crime – which we are tackling through the use of intelligence led, targeted enforcement, our approach has been built on some of the methodologies from the National Violence Reduction Campaign;

- Sexual Offences – which we are tackling through a number of means, including effective partnership working under the umbrella of the Dundee Violence against Women Partnership and the Multi-Agency Public Protection Arrangements (MAPPA) process;

- Fire and Road Safety – which we will tackle through effective partnership working and the delivery of projects such as Home Fire Safety visits, Safe Taysiders and Safe Drive Stay Alive;

- Community tensions/Counter Terrorism – which we will tackle through awareness – raising using our partnership approach to embed the Contest national strategy in our processes;

In addition, there are a number of cross cutting priorities which will be woven into the DCSP Strategy and Action Plan. These are:

- Personal Safety/Home Safety – which we will tackle by delivering targeted input on a range of issues including e-safety, scams, accident prevention and home fire safety;

- Public Protection – which we will tackle to support the vulnerable through the use of intelligence led interventions;
• Alcohol and Drugs – which we will tackle by supporting the work of the Alcohol and Drugs Partnership, including the work of the Focus on Alcohol strategy which includes the promotion of safe drinking levels, tackles alcohol supply to minors and the development of the Overprovision statement On Alcohol supply for the Licensing Board;

• Reassurance – which we will tackle through the provision of high visibility patrols, giving regular feedback to communities and responding effectively to community concerns;

• Risk and Vulnerability – which we will tackle through targeting our resources to ensure those most at risk of becoming victims are supported and that we continually analyse our data to identify future risks for the city. Part of our approach to this is the developing Repeat Callers process.

These priorities are also addressed by CSP partners in their own action plans.

In addition, monthly tactical assessments are produced by the Community Intelligence Unit to enable partners to work together to identify and address problems and find solutions. This has led to the development of an intelligence led tasking approach in Dundee. This allows us to collect, collate and analyse information which in turn allows us to target resources to those issues where need is greatest. The Community Intelligence Unit is funded jointly by Dundee City Council and Police Scotland.

One example of this is the Repeat Caller process where we identify members of the public requiring additional targeted support. Callers are visited and their vulnerability and the risks within each scenario are assessed. A problem solving and partnership approach is put in place, initially by the Police but thereafter linking in with partners to reduce risk. This work builds on lessons learned from significant recent cases such as the Pilkington case. To date, we have identified and supported 2100 repeat callers.

Quarterly analyst’s reports are produced by the intelligence unit for the Local Community Planning Partnerships to enable partners to identify and work on issues at a local area level. In the six month period up to April 2012, the LCPPs consulted over 5000 people on the community safety issues affecting their communities. These issues were fed into the DCSP strategic assessment and have been included in the local community plan for each multi-member ward.

### Dundee Outcome 6 - Our communities will be safe and feel safe.

**Intermediate Outcomes**

6a) Dundee has reduced levels of crime.

6b) Dundee has reduced levels of re-offending.

6c) Dundee has reduced fear of crime.

6d) We have improved safety of our local communities by reducing the risk to life, property and the environment from fire.

6e) We have improved road safety.

6f) We have improved personal safety in the home and in the community.

- ** No target has been set as the Partnership are seeking to both tackle Domestic Abuse whilst encouraging the reporting of same – accordingly the target may be to increase and decrease recorded levels according to the activity.

**IMPROVING OUR PARTNERSHIP AND PERFORMANCE**

**Targeting Areas of Deprivation**

With over 40,000 people in Dundee living in the worst 15% SIMD areas in Scotland, there is evidence to suggest that the crime rates in these areas are proportionally higher than the city-wide average. The DCSP has therefore prioritised partnership resources towards these areas. The Police Scotland Community Investigation Unit in Tayside, 3 officers of which have been funded as part of the Service Level Agreement between Dundee City Council and Police Scotland, has prioritised its work in the Community Regeneration Areas and has been active in the Lochee, Hilltown and Stobswell areas. The DCSP commissioning budget is used to support the delivery of a Community Safety Strategy and again these resources are targeted towards the areas of greatest need.

**Prevention and Early Intervention**

Much of the DCSP’s success has been based on prevention and early intervention, some examples of which include:

- The Hate Incident Multi-Agency Partnership (HIMAP) raises public and partner awareness about what constitutes a Hate Crime and how crimes and incidents can and should be reported. HIMAP will continue to have a key role in supporting individuals and groups with protected characteristics and in doing so promote Equality and Fairness. Early action in response to trends has been to support shop keepers, taxi drivers and to tackle the under-reporting of disability related crime.
• More than 40,000 contacts are established annually with young people as part of the DCSP’s divisionary programme, funded by the CSP Local Action Fund and the local Community Regeneration Forums. N.B due to the method of recording attendance at diversionary programmes, it is not possible to specify the numbers of young people attending;

• The creation of a Holiday Diversionary Programme fund, which has been matched by Dundee City Council Risk Management Section, has demonstrated the effectiveness of preventative spend. Vandalism to school properties during school holiday periods has been reduced by over £100,000;

• Over 1,600 primary 7 pupils take part in the Safe Taysiders Programme aimed at enhancing the ability of children to make positive choices in relation to risk taking behaviour and to develop an understanding of what to do in the event of an accident or serious incident;

• Our partnership approach in targeting Home Fire Safety Visits has contributed significantly to a 17.2% reduction in dwelling fires and a 50% reduction in fire fatalities encountered;

• Additional funding has been allocated to the removal of household waste to reduce fire risks. This approach along with the work co-ordinated by the Fire Related Anti-Social Behaviour Group has contributed to a 16.3% reduction in deliberate primary fires (Typically includes buildings, vehicles, outdoor structures or any fire involving casualties or rescues);

• Our partnership approach in engaging with youths in the delivery of educational initiatives and diversionary activities has also contributed to a significant 29.8% reduction in deliberate secondary fires (Typically include outdoor incidents involving grassland and refuse fires);

• The E-Safety Strategy aims to reduce the community safety risks presented by modern technology and electronic communications;

• The development of the Home Safety Check Scheme will enable a more joined up approach to preventing accidents in the home;

• The introduction of the Repeat Caller process will reduce the risk to those who are making repeated calls to several agencies for help. This initiative has reduced repeat callers to the Police and is being hailed as good practice for other areas to follow. Other partners are now trying to identify ways of highlighting repeat callers within their systems.

Priorities for Improvement

It is recognised that the work of the Dundee CSP is about improving outcomes and how effective processes can lead to more efficient and effective use of Partnership resources to address community safety issues. A joint issue assessment process which includes additional community analysis, planning and resource allocation has been developed. This measures impact on communities and also positive media stories. Oversight of this process will be through the CSP Operational Group which meets monthly. We believe that by using our resources in this way we will avoid duplication of effort and maximise use of the available resources and that it fits well with a co-location model for key staff teams. Critically, it is an intelligence led process, prioritising and integrating our limited resources.

The Local Community Planning Partnerships have a key role to play in identifying and addressing local community safety issues. The quarterly community intelligence reports have
supported this process. Community Safety staff work with community groups to identify and address local community safety issues and implement A community capacity building approach.

The Community Safety Partnership carried out a Fit for Purpose review in 2010-11. The main area for improvement identified was the need to review the way in which we measure our performance. To this end, greater efforts have been made to ensure consistency between the outcomes and outputs identified in the Single Outcome Agreement and those identified in the DCSP Strategy and Action Plan. A Strategic Information Monitoring and Evaluation group has been established to make these connections and ensure that an appropriate set of data collection systems are developed to gather information to enable effective performance measurement.

One of the distinct areas for improvement in this area is the way in which we measure the fear of crime. In the past the Tayside Police Public Perception Survey has produced some data as has the Dundee Partnership Citizen Survey and work has been done to standardise the questions to give us the strongest evidence of local views. In addition, we are exploring the possibility of doing some joint work with Dundee University Psychology Department to look at the fear of crime, how it may be measured and what possibilities there may be to address this.

The Scottish Community Safety Network in partnership with the Scottish Government has recently produced a Community Safety Partnership Self-Assessment Toolkit as part of the Safer Communities Programme. Dundee CSP will use this resource to enhance its ethos of continuous improvement over the period of the SOA.

Another area for improvement is the need for a better co-ordinated approach to dealing with home safety. This will be tackled by establishing a Home Safety Check Partnership which will develop a more joined up approach to identifying and dealing with home safety issues. This will be achieved by setting up an inter-agency cross referral service which will mean that any worker entering the home will be able to identify and deal with a more comprehensive range of home safety issues directly or through referral to the appropriate service.

Dundee Community Safety Partnership has established a new Community Safety Hub which has co-located the Antisocial Behaviour Team, The Community Safety Team including Community Safety Wardens and the Police Community Safety Team including the two CSP Analysts. In addition, other CSP partners are able to use hot desk facilities to further enhance effective partnership working. This will enhance partners ability to improve responses to community safety issues including the repeat caller initiative whereby partner inputs have made significant differences to the quality of life experienced by those affected.

Partners continue to develop approaches which make sure that offenders have access to the services they need to reduce reoffending and years 2 and 3 of the Change Fund have allowed us to work in partnership to develop mentoring services for offenders.

Along with statutory partners, Criminal Justice Social work will assess and manage registered sex offenders who are subject to community and post custodial supervision requirements. This is in line with the jointly established Multi Agency Public Protection Arrangements (MAPPA) in Dundee.

There will be a specific focus on progressing the recommendations made by the Commission on Women Offenders including the active development of a pilot Community Justice Centre.
Outcome 7 - Dundee will be a fair and socially inclusive city.

**STRATEGIC CONTEXT**

While Dundee is a modern, vibrant city which has undergone a remarkable transformation it also has levels of poverty and deprivation which make every day life a struggle for individuals, families and communities across the city. Too many people are more likely to have insufficient income, lower life expectancy, experience higher levels of crime, greater unemployment and lower educational attainment and too many children are less likely to achieve positive life outcomes.

The Dundee Partnership believes that every person and family in Dundee wants, and should have the right, to share in the success we achieve as a city. Everyone should have the right to be heard and valued and to participate fully in our community and that no one should be denied that because of their economic status.

The biggest obstacles people face in achieving this are poverty and inequality which have an enormous impact on life chances. People living in poverty are much more at risk of poor outcomes in health, education and employment and are thus more vulnerable and more likely to be exposed to social problems such as crime, drug and alcohol abuse, and anti-social behaviour. Poverty is particularly damaging for children and contributes to poorer outcomes across the course of life. In turn, these poverty associated outcomes carry very high costs in terms of lost productivity, impacts of crime, ill-health, reliance on public services, and shorter life-spans.

The context is a challenging one. The global recession, government policies to reduce the national deficit, welfare reform changes and a difficult employment market combine to create the circumstances where poverty and inequality are likely to become even worse.

Following an analysis of local and national statistics available for Dundee, it is possible to present a profile of poverty and exclusion in Dundee. While this varies across the city, the headline statistics outlined below demonstrate the depth and breadth of the challenge for Dundee.

In 2012, Dundee City:

- had the third largest percentage of its population (42,125 people, -29.3% of the population) living in the 15% Most Deprived areas of local authority areas in Scotland - SIMD 2012.

- had the fifth largest percentage of its population (25,690 people, 17.8% of the population) classed as income deprived of local authority areas in Scotland - SIMD 2012.

- had the fifth largest percentage of its working age population (15,465 people, 17% of those aged 16 to 60/64) classed as 'employment deprived' of local authority areas in Scotland - SIMD 2012.

- had a higher percentage of its working age population (5,600 people, 5.8% of those aged 16 to 64) claiming jobseekers allowance than the Scottish average (4.3%) (2012 Quarter 1).

- had a higher percentage of its working age population (19,980 people, 20.8% of those aged 16 to 64) claiming Key Benefits than the Scottish average (16.8%) (2012 Quarter 1).
• had a greater percentage of its population aged 16 yrs + (6,590 people, 5.4% of those aged 16 to 64)) claiming Incapacity Benefit or Severe Disablement Allowance than the Scottish average figure. (4.1%) (2012 Quarter 1).

• had a greater percentage of households (44.3%) in these lower income categories £0-20k than the Scottish average(36.9%) (2009).

• has an average mean income that is 11.6% less than the Scottish figure, and 16.8% less than the UK.

• had the highest percentage of households in relative poverty (26% to 24%)) across Scotland between 2002 and 2008.

• had the third highest percentage of its children (8,869 children, 37%) living in areas within the 15% Most Deprived in Scotland. - SIMD 2012.

• had the second highest percentage of its children (8,562 children, 35.6%) living in areas within the 15% most income deprived in Scotland - SIMD 2012.

• had over a quarter (25.8%) of its children living in poverty in 2010.

• had the second highest percentage (25.8%) of its children living in low poverty of all Scottish Local Authorities in 2010.

• had the second highest percentage of its pupils registered for free school meals and is well above the Scottish average - for both Primary (31%) and Secondary (22.1%).

• had 5,300 families in work that were in receipt of Working Tax Credits and Child Tax Credits in 2009/10, this was the 9th highest Local Authority percentage.

• had almost a third (32%) of its housing tenure as either housing stock or Registered Social Landlord – 2001 Census.

Sheffield Hallam University has estimated that benefit claimants in Dundee will suffer annual losses of up to £58million as a result of welfare benefit changes. That means reduced incomes for the people in Dundee who are already the poorest and most vulnerable. The introduction of Universal Credit, with housing and other living costs being combined and reduced and paid monthly to one individual in a household, will bring significant additional challenges in terms of managing household budgets and general financial capability. It is widely anticipated that this will result in an increase in rent arrears and the number of individuals and families presenting as homeless.

Based on the Scottish Index of Multiple Deprivation, Dundee has identified a number of community regeneration areas. These are found in six of the city’s eight local authority wards. They are the focus for the additional targeting of services and resources to close the inequality gap in the city. The boundaries of these wards will be reviewed in the coming months in the light of SIMD 2012 following a full analysis of the changes to individual datazones to understand what caused them to enter or leave the most deprived 15% for Scotland.

To help partners to understand the scale, distribution and intensity of deprivation across the city, community profiles have been produced for every ward which break down the SIMD results by individual domain and present the results in smaller neighbourhood areas. These can be found on the Dundee Partnership website at: http://www.dundeepartnership.co.uk/content/local-community-planning-partnership-community-area-profiles-2013.
The Partnership also strongly endorses the Making Better Places, Making Places Better analysis recommended by the Improvement Service. A profile of each ward has been produced which shows datazones with outcomes in the most disadvantaged 15% across domains. (See Appendix 1). These confirm that there is significant variation even within wards but that the overall result is that datazones facing deprivation do indeed cluster geographically and experience most or all aspects of deprivation simultaneously. The table below summarises the most disadvantaged 15% datazones within the wards by level of deprivation.

Table 22: Most disadvantaged 15% datazones within the wards by level of deprivation

**IMPROVING OUR PARTNERSHIP AND PERFORMANCE**

Scotland’s Tackling Poverty Board has stated - "Poverty compromises our ability to improve outcomes across all social policies. Anti-poverty action must be a mainstream priority and the responsibility of every Community Planning Partner".

This SOA will aim to ensure that anti-poverty awareness and activity is at its heart. It includes a suite of closing the gap indicators which will measure progress in reducing inequality within the city. It also includes indicators which will map changes to levels of child poverty.

Emphasis is being increasingly placed on prevention and early intervention, and as well as providing help and support to improve the financial capability of people who have had to turn to advice services when their problems have reached a crisis point. Financial education is being given an increasingly higher profile in Primary and Secondary schools under Curriculum for Excellence, with the long term aim of producing future generations who are more financially aware and better equipped to manage their financial affairs.

Financial inclusion challenges are being tackled via development of a close partnership between Council Services and the third sector, again with a focus on facilitating earlier interventions with front line staff in the Council and other public services being trained to recognise the signs of poverty and to make referrals to agencies best equipped to provide appropriate expert advice and support.

There are currently six Community Regeneration Forums allocating £750,000 per annum in the areas of greatest deprivation in Dundee. Their main responsibilities are to ensure that communities have a voice and that local priorities are addressed through the allocation of funding for local priorities. The overall feedback from the Forums collectively is that there is a healthy level of interest from local residents in becoming elected to Forums. Collectively, the Regeneration Forums in Dundee have been cited as an example of good practice nationally in the Scottish Government’s Scottish Community Empowerment Action Plan.

Dundee City Council’s Fairness Strategy and Action Plan for Challenging Poverty and Promoting Inclusion in Dundee recommends a step change and renewed commitment to tackling poverty, building on past and current efforts and informed by evidence of effective approaches (for more detail on the Fairness Strategy see section 3.2). The Strategy focuses on projects and services aimed at expanding availability of affordable credit and safe and ethical savings opportunities; tackling the growing problem of fuel poverty through both maximising incomes and reducing energy costs; increasing the take up of benefit, money and debt advice and providing much needed support for the increasing numbers of people having to appeal against refusal or withdrawal of benefit entitlements.

The most significant and immediate priority is the impact of welfare reform on those who are already vulnerable due to income inequality. Departments from across the Council are working closely with Job Centre Plus, Skills Development Scotland, Dundee College and voluntary sector advice providers to prepare for, and minimise the many ways in which the current and forthcoming benefit changes will undermine our anti-poverty objectives for the city. A number of issues are being addressed including:

- Raising awareness of front line service providers through a dedicated eLearning package and training from the Child Poverty Action Group;
- Early and joint Council/DWP communication and interviews with households identified as potentially affected by the introduction of the benefit cap and under-occupancy rules;
- Increasing numbers of homeless applications;
• Making amendments to allocation policies to help to ensure that available housing matches the need for suitable size accommodation; and
• Making connections to employability programmes and learning activities especially in relation to digital inclusion.

Outcome 8 - Our People will live in strong, popular and attractive communities.

STRATEGIC CONTEXT

The Dundee Partnership is committed to building stronger communities by creating the right physical and social environments for investment and housing supply; taking targeted action in the most disadvantaged communities and devolving power to the local level so that communities can have more influence and ownership.

Housing

Housing has a key role to play in encouraging and enabling the creation of successful, quality places to live which contribute to the identity of the city. The recent recession has led to a considerable reduction in new build rates around the city and an overall downturn in the housing market. However, despite the lack of investment in this sector, targeted areas across the city have seen new quality affordable housing being created. Unpopular house types have been and continue to be demolished to make way for new types of houses and local amenities more fitting to 21st Century lifestyles whilst matching expressed housing needs and aspirations.

In terms of tenure, the profile across greater Dundee housing market area as a whole is similar to that seen nationally. However Dundee continues to have a lower proportion of home owners than most Scottish authorities and levels of home ownership appear to have changed little since 2001. This is consistent with the suggestion that there may not be sufficient housing opportunities within Dundee for those who wish to buy.

In terms of tenure, the profile across greater Dundee housing market area as a whole is similar to that seen nationally. However Dundee continues to have a lower proportion of home owners than most Scottish authorities and levels of home ownership appear to have changed little since 2001. This is consistent with the suggestion that there may not be sufficient housing opportunities within Dundee for those who wish to buy.

Housing market and wider economic trends are cyclical, and at present there is very little clarity in terms of the duration and severity of the current recession. It will therefore be important for the Council and housing market partners to monitor housing market trends over the short to medium term to assess the extent to which recent trends persist.

The social rented sector has also seen some increase in pressure suggesting that pressure in the wider market has had some impact on social rented demand. However there is no suggestion of a significant problem of under supply in social rented housing within Dundee. Nevertheless there remains an important policy question as to whether future new social housing development should focus on addressing unmet housing need. If so this would require an increase in the supply of 4+ apartment dwellings within the sector.

The Local Housing Strategy 2013-2018 is the Council’s primary strategy for the provision of housing and associated services to address homelessness, meeting housing support needs and tackling fuel poverty. The document is supported by an assessment of housing need, demand and affordability study that seeks to determine if there is need for intervention in the market to secure the provision of affordable housing and seek to inform the future planning and targeting of public and private investment.

The Local Housing Strategy is committed to working in partnership with all stakeholders to deliver the Government’s 21st Century Vision for Community Care. The philosophy of partnership working is reflected through Dundee’s community care strategic planning process. The city has five main Community Care Planning Groups. These groups are the driving force behind Dundee’s community care and housing support planning process. The Local Housing Strategy identifies the requirement for Community Care Housing in the city for the periods 2013-2018, the groups identified being Older People, Mental Health, Learning Disabilities and Physical Disabilities / Sensory Impairment.
Shopping

Shopping plays an important role within the city and is an important employer making a major contribution to the city’s economy. The District Centres perform a valuable function as a focus for a number of communities across the city. They provide a range of shops, services and leisure facilities in locations which are highly accessible by public transport and help create a sense of identity for the communities they serve. Nevertheless, the District Centres have, over a number of years, shown evidence of decline. Growing shop vacancy levels together with declining environmental quality have given rise to special measures targeted at the Albert Street, Hilltown and Lochee District Centres aimed at addressing these problems and enhancing their ability to attract new investment. These measures have also sought to improve the district centres as part of the regeneration of the wider communities that they are within. Part of the approach has been to develop these centres to improve quality of place as part of sustainable neighbourhoods with improved accessibility from the surrounding area.

Whilst the recession has hit hard, Dundee’s vacancy rates for shops has changed very little during this period, demonstrating some robustness. The Dundee Region Retail Study 2006 identified that future available expenditure would be insufficient to support non-bulky goods floorspace provision in District Centres. The Study also identified that there was already sufficient convenience floorspace within the City as a whole up to 2017. Given the current economic climate there is unlikely to be much growth in the available retail expenditure to change the conclusions of the Retail Study’s findings. The issue for consideration is whether the District Centres can remain in their current form and size. Given the level of vacancies in some of the centres there may be the need to consider consolidation into a smaller size and aim to focus investment to these reduced areas. This approach seeks to build on the work already underway in some of the district centres with the aim of delivering sustainable quality centres that serve their surrounding neighbourhood.

Improving neighbourhood environments

The protection, maintenance and management of Dundee’s natural and built environment are crucially important to the future development of the city and the well-being of our citizens and visitors. As part of the Council’s Changing for the Future agenda, the new Environment Department has been established. Incorporating Dundee Contracts, all ground maintenance, waste management and environmental services, the Environment Department will deliver a range of services which contribute towards creating strong, popular and attractive communities for the citizens of Dundee.

Perceptions

The Dundee Partnership Citizen Survey reported that when it comes to the influence of people in their community, there is a more positive perception of the influence that people can have with 38% of respondents stating that they believe that people can have either a great (1%) or some (37%) influence. Just 13% stated that they believe people in their community have no influence over decisions which affect the neighbourhood.

**IMPROVING OUR PARTNERSHIP AND PERFORMANCE**

**Physical Regeneration**

Four priority areas for regeneration activity in Dundee have been established and masterplans and regeneration frameworks are being implemented for Stobswell, Ardler, Hilltown, Whitfield and Lochee with major public/private investment already having taken place and with future expenditure committed. The Dundee Partnership recognises the need to continue targeted investment towards specific geographical areas where strong opportunities exist to consolidate existing communities, to mitigate further deterioration and deprivation in these communities, and to provide the basis for addressing the wider problems in the city.

Working documents set out the delivery mechanisms to deal with environmental issues and promote green and open space developments identified in Local Community Plans. Greenspace Inventory / Action Plans were previously piloted in Coldside and this is now being rolled out across the 8 LCPPs with support from a team comprised of staff from the Council’s Leisure, Culture & Communities, Housing, City Development and Environment Departments to progress audits and local consultation. The types of work completed as a result of the audits include provision of play facilities, park lighting, landscaping and repair work, path signage, creation of community gardens and woodland areas.

**Housing Investment**

The Council and other Registered Social Landlord’s (RSL’s) have a duty to meet the Scottish Housing Quality Standard by 2015 and continue to put in place programmes to achieve this in their existing stock. Future investment profiles for new build stock should also ensure that dwellings as a minimum meet the standard at all times. RSL’s in Dundee are all confident that they will meet the SHQS by 2015. The City Council is investing £140 million pounds by 2015 to ensure that all its core stock meets the SHQS. Following the progress of regeneration initiatives in the city since 2005 and the implementation of a substantial demolition programme within the Council’s stock the most recent Housing Need and Demand Study has indicated that the supply
and demand for social rented housing is more balanced. The Scottish Housing Regulator annual returns identifies that the projected RSL investment in Dundee from April 2012 - March 2015 will be £44million.

The Housing Department continues to work closely with the Housing Associations on various initiatives, such as the Dallfield insulation and district heating programme aimed at reducing homelessness, anti-social behaviour, the issues of fuel poverty and addressing the imbalance between housing need and supply across the city.
Outcome 9 - Our communities will have high quality and accessible local services and facilities.

STRATEGIC CONTEXT

Delivering services that help to close the gap between the Community Regeneration Areas and the rest of the city remains one of the most important challenges for the Dundee Partnership. The availability of and satisfaction with high quality and accessible local services and facilities is a key component of popular, stable and attractive communities. Through its activities, the Dundee Partnership is committed to ensuring that communities have access to high quality community, leisure, healthcare, shopping, employment, education and public transport facilities.

Local Community Planning

The Partnership takes action to improve neighbourhood services and facilities through the 8 LCPPs and in particular through each of their targeted Local Community Plans. These are the means by which the national and Dundee outcomes are combined with priorities emerging from local areas to shape city-wide and local action. They bring together elected members, community representatives and partner agencies with the common purpose of improving services and communities. The LCPPs build on a decade of developing Dundee's Decentralisation Strategy and working to promote local co-ordination within the strategic priorities of the city.

The previous Local Community Plans covering the period from 2008-2011 outlined 782 actions to be implemented across the city including the creation of major new Community Facilities in St Mary's and Whitfield. More than 90% of the objectives prioritised were achieved and the Dundee's Local Community Planning Partnership Model was held up as an example of good practice by Audit Scotland. Each new LCPP has worked with other stakeholders to consult widely and develop outcome based Community Plans for the period from 2012-2017. The new Local Community Plans were launched in May 2012 following an extensive community consultation over a six month period between May and October 2011. A total of 16,000 Local Community Plan Summaries have been distributed to community venues and public places across the city.

Dundee Partnership Citizen Survey

The Dundee Partnership Citizen Survey has been carried out for a number of years and seeks to establish, by Ward, the public's views on general and specific aspects of life in Dundee, including the home and neighbourhood; health; education and employment; community safety; financial issues as well as levels of satisfaction with public services. The survey helps to strengthen the evidence base which supports the development and implementation of the SOA.

Overall satisfaction with quality of life in the neighbourhood is high, with 99% of respondents stating that they are either very satisfied or satisfied in this respect.

In relation to local services and facilities, satisfaction is very high and greatest in relation to Fire service, Local health services, Refuse collection, Local schools and Community Warden Service. Satisfaction is lowest in relation to local youth facilities where just 85% of respondents stated that they were satisfied. Despite this having the lowest level of satisfaction, it is one of the most improved in relation to service satisfaction.

In relation to accessibility, respondents were asked how easy it was to access a range of local facilities and services. The most accessible services were perceived to be Refuse collection, Local health services, Street cleaning, Local shops and Police service. Less accessible (or less likely to be used/available) were Community Warden Service, Local youth facilities, Social care/social work services and Local phone boxes.
The majority of respondents (96%) stated that they believe services in their local area are affordable. Services most likely to be perceived as not affordable are public transport and sports facilities.

Satisfaction with different aspects of the neighbourhood is high and improving when compared to 2010. The highest levels of satisfaction are with Cleanliness of the streets, Shopping facilities, Quality and maintenance of open spaces and Cleanliness of the area around the home. The lowest level of satisfaction is with children's play facilities (88%), although this has improved significantly compared to previous years.

**Dundee Outcome 9 - Our communities will have high quality and accessible local services and facilities.**

**IMPROVING OUR PARTNERSHIP AND PERFORMANCE**

The Partnership will continue to strengthen its delivery of the Government's public service reform agenda and in doing so, aim to deliver high quality and accessible local services and facilities through prioritising resources to those geographical areas in greatest need. It will empower local communities and local service providers to work together to develop practical solutions that make best use of all the resources available. Public services will seek to involve people everywhere in the redesign and reshaping of their services and facilities, and will develop workforce capabilities to deliver that aim.

**Community Engagement**

Across the Partnership there is an ever increasing appetite for more community engagement as partners, groups and organisations seek to improve their policies and services in response to local needs. While the Partnership is keen to develop community engagement generally, it is important that this activity is co-ordinated to ensure that effort is joined up where possible and that duplication is avoided. To achieve this, a new model for community engagement has been developed. It reflects the various levels and methods of engagement throughout the partnership and aims to ensure that there are 'routes' of engagement with the key communities of place, interest and identity in Dundee.

Through this model, the Partnership has delivered support and capacity-building using an integrated approach which reinforced the principles of the national standards for community
engagement. This has enabled communities and their representatives to operate as effective and influential members of the Partnership.

Community Centres

Partnership working with Local Management Groups is essential to ensure that the Community Centres across the city are fully developed to be able to meet the needs of local people. This is achieved by coordinating a wide range of Community Learning and Development opportunities, and the delivery of a comprehensive programme of social, leisure, recreational, educational and cultural activity. These programmes provide participants with opportunities to learn new skills and develop confidence and self-esteem. Much of the community learning programmes are delivered in partnership with a number of other city based organisations.

The Community Centres also provide the main delivery venues for the Council's programmes of Youth Work, Adult Learning and Community Capacity Building. Kirkton, Ardler, Douglas and Charleston Community Centres also have integrated Library and Information services. All of the Community Centres are run in partnership with the local communities which they serve. Members of these groups, which have full charitable status, live locally and are well placed to determine local needs and opinions and have a considerable involvement in developing activity programmes in partnership with Dundee City Council. A capital investment programme of over £5.5million over four years is improving and creating new community facilities across the city.

Public Participation

The Annual Citizen Survey highlighted the recorded very low levels of public participation in services such as after school club/drop-in centres, youth information services/community-based projects etc. (between 96-99% of respondents had never participated). The Dundee Partnership is therefore committed to improving public participation in services and decision-making. The Partnership's Strategic Theme Groups are analysing the social survey findings to look at any underlying local issues and trends. The survey results are also being disseminated to the Local Community Planning Partnerships and Communities Officers to analyse some of the possible underlying local issues that may be contributing factors to resident satisfaction of local services and facilities as well as public participation.

Community Asset Transfer

Local partners considered the first draft of the Scottish Government’s Community Empowerment and Renewal Bill during 2012. Community representatives hoped that more emphasis could be given to highlighting potential community benefits as well as providing opportunities to lease buildings and/or land as opposed to purchase only.

Following this consultation, Dundee City Council prepared a draft Community Asset Transfer Strategy. This was discussed with Local Community Planning Partnerships and the Building Stronger Communities Theme Group of the Dundee Partnership for comment towards the end of 2012. Feedback reinforced comments returned to the Scottish Government relating to leasing assets. Community groups also highlighted the need for capacity building support to consider some of the very practical and complex matters relating to transferring assets, eg costings and legal/planning advice. These comments are to be taken into account as the Council continues to development this potentially influential strategy. Partners also look forward to participating in consultation on the second draft of the Bill which is expected in the autumn of 2013.

Accessible Travel

Dundee City Council in partnership with transport operators in the city is developing smart travel products on the National Entitlement Card for school and college students, public sector staff and ultimately the whole community to make access to more integrated and efficient forms of travel more affordable to all. The City Council is taking the lead role in developing these
products for the Scottish Cities Alliance and Transport Scotland for the eventual roll out across the country.

As part of the City Council's Fairness Strategy, Community Transport in Dundee is developing suitable transport options for groups, communities and individuals who are presently excluded from using existing mainstream transport. Meeting these transport needs will require a variety of transport solutions including vehicle brokerage.

Meeting these needs will ensure access to social, education, health, work and recreational facilities for all. Delivery of Community Transport Services will be developed through a phased partnership approach between the City Council and the voluntary sector over the next five years.

In addition, a Regional Health & Transport Framework has been developed by Tactran, working with NHS Tayside to address the key linkages between health and transport.
Outcome 10 - Our people will live in a low carbon, sustainable city.

STRATEGIC CONTEXT

Sustainable economic growth and the drive towards a low carbon future have risen up the political and popular agenda as, more than ever before, people are experiencing first hand the effects the environment can have on their quality of life. The impact of climate change, traffic, energy production, resource use, waste and environmental pollution all challenge our determination to pass on to succeeding generations an environment in better shape than the one we inherited.

Dundee is blessed with a unique city environment. Its location and position on the south-facing bank of the Tay makes it the sunniest city in Scotland, whilst the river itself is of international significance for wildlife. As the city has grown economically and culturally over the last ten years, we have also seen real improvements in many aspects of Dundee's built and natural environment as legislation and public attitudes have helped to drive changes in policy and behaviour.

Nevertheless, Dundee remains threatened by both global and local influences, and the activities taking place in Dundee have effects beyond the city boundaries. Whilst we all share a desire for clean air and water, green open spaces and the security that the natural resources we use and enjoy will not run out, we also share the consequences of our actions that pollute the atmosphere, destroy wildlife habitats or cause other environmental damage.

As Dundee continues its positive journey in economic and social renewal a balance is required with both the shorter term enhancement and long-term sustainable development and regeneration of the city.

Climate Change

The Scottish Government is committed to a long-term climate change target for a 42% reduction in greenhouse gas emissions by 2020 and an 80% reduction by 2050. In contributing to this target, the Dundee Partnership seeks to promote and support a wide range of climate change mitigation measures such as energy efficiency, sustainable design and construction and sustainable transport. It also supports measures to adapt to the effects of climate change through recognition of the importance of the water environment and flooding, protection and development of green networks, habitats and woodland, action on waste, air quality measures and supporting the system of environmental regulations.

In September 2008, the Dundee Partnership signed and endorsed a ‘Supporting Scotland’s Climate Change Declaration’ for the city. This public statement commits the Partnership to acknowledge the reality and importance of climate change and commit partners to take action to mitigate and adapt to the effects of climate change.

The Dundee Partnership uses production and consumption based indicators to prioritise areas for action and raise awareness of the importance of area-wide emissions. The area-wide consumption footprint for Dundee indicates that housing and transport are the largest components, and the production figures indicate that industry, commercial and public sector are the largest impacts. Figures for 2010 (latest available, published by UK Government in August 2012) and show that from 2005 to 2010 there has been a 11.5% reduction in per capita CO$_2$ emissions in the Dundee local authority area. From 2005 to 2010 there have been emissions reductions in road transport, industrial, commercial and domestic sectors. In 2010, 41% of end-user CO$_2$ emissions were attributed to the Industry and Commerce sector, 37% to the domestic sector, 21% to road transport and <1% to land use, land use change and forestry.
Research from SEPA and from a Council commissioned coastal flood study shows that significant parts of Dundee are at risk of serious flooding and/or erosion unless preventative measures are taken. There already exists a flood emergency plan but a prevention strategy and coastal protection plan needs to be developed to inform on the protective measures that require to be implemented.

Inequalities

The link between climate change and inequalities is clear. People in poverty are the most vulnerable to the negative effects of climate change, as they tend to have a lower level of physical and mental health, live in worse housing with less access to insurance, and have fewer resources to cope with rising costs. Equally, the measures to combat climate change – namely emission reduction strategies are almost the same as those designed for health improvement, whether through improved housing, active transport, changes to patterns of food consumption or economic localisation.

In 2009, 15,000 households in Dundee (22%) were in fuel poverty including 3,000 families and 8,000 pensioners. Since then rapid rises in the cost of energy have outstripped any rises in household income resulting in the probability that levels of fuel poverty will have increased dramatically in Dundee. Innovation and investment in energy supply and energy efficiency is therefore required to help transform Dundee towards a low carbon city. Dundee is well placed to capitalise on this with innovators in the universities and college in both industrial and academic research. Whilst Dundee can utilise low carbon development and research to attract renewable energy sector and jobs, this research can assist the wider socio economic benefits for residents.

In response to the need to eradicate fuel poverty the council established the Dundee Energy Efficiency Advice Project (DEEAP). The aim of DEEAP is to provide a service throughout the city advising householders on fuel tariffs, how to reduce bills, energy efficiency measures, advocacy work resolving individuals debts with energy suppliers, and other advice and referral work. In 2010/11 DEEAP help residents to achieve savings of £447,110 through energy advice, insulation measures and social tariff fuel savings. The total savings made by the project for families in Dundee amounted to £841,361. Throughout that year DEEAP dealt with 1572 energy enquiries, renegotiated 158 fuel debts and assisted 630 households to gain insulation. It has also targeted areas with high concentrations of electric heating to help families register for social tariffs. A total of 715 families are now registered, saving 20% on fuel bills. Partnership with Scottish Hydro Electric has enabled 191 families in fuel poverty to receive free white goods, saving £171,000. DEEAP also help families to maximise benefit claims, with £223,251 awarded during the year. The project assisted many families in the severe winter weather.

Strategic Plans

The TAYplan Strategic Development Plan and the Local Development Plan are key documents for Dundee which both recognise the long term implications of climate change and sea level rise. They support the switch to a low carbon and zero waste economy for Dundee by providing for appropriate infrastructure and improvements in our resilience to climate change and other potential risks. They seek to deliver better quality development and places which respond to climate change by ensuring resilience built into the natural and built environments through a presumption against development in areas vulnerable to coastal erosion, flood risk and rising sea levels. This approach will endeavour to make the best use of existing networks of infrastructure, movement corridors and ecosystems. It will aim to achieve a walk-able environment combining different land uses with green space and ensure that a range of sustainable and active travel choices other than the car are available. It is intended that this approach will contribute to the delivery of a better quality of place for the people who live, work and visit the city.
Waste Strategy

Waste management in Scotland is facing a period of fundamental change. Driven by EU policy and legislation there has been an acceptance that we must move to a position where we produce less waste, reuse and recycle more and recover value from as much as possible of what is left. To this end, we are all moving towards a Zero Waste Scotland.

In 2008 the Scottish Government set new medium and long term targets for recycling and composting waste. They have been carried over into the Zero Waste Plan and are the targets that all 32 of Scotland's local authorities are striving towards:

- 40% by 2010
- 50% by 2013
- 60% by 2020
- 70% by 2025

Dundee City Council has already met the first target of 40%.

Air Quality and Health

Local air quality is poorest in the city centre and along the strategic road network. A city-wide Air Quality Management Area (AQMA) was declared for exceedences of the statutory European and National air quality objectives for nitrogen dioxide (NO\textsubscript{2}) and fine particulate matter (PM\textsubscript{10}). Traffic sources, are the primary pollution source and considerable efforts are being made to effect a modal shift away from the use of private cars, where alternative modes are available. Other combustion sources and energy choices can also have an adverse impact on air quality. Following a period of public and stakeholder consultation a corporate Air Quality Action Plan has been developed to identify possible actions and policies to improve local air quality.

Quality Greenspace

The quality of local surroundings and the ability to access and use them have a fundamental impact on how people feel about and relate to the places where they live. Much research has been undertaken in Scotland by Greenspace Scotland and others in proving the benefits of greenspaces. Green open spaces that are well designed and purposeful are a hugely valuable resource and can create a sense of place and community, provide positive health impacts and opportunities for recreation as well as contact with nature. Dundee’s excellent distribution of greenspace as well as its beaches and burns, is one of its greatest assets in providing free opportunities for its residents to have an improved quality of life.

Dundee has a wide diversity of public open spaces covering which accounts for 28% of the urban area. Many are multifunctional and contribute to the quality of life in Dundee by providing opportunities for active and passive recreation, an attractive and sustainable urban environment and a space for nature. They vary considerably in size from large country parks of over 100 ha to small local greenspaces of less than 100m\textsuperscript{2}. Whilst large parks are required to accommodate the recreational needs of large sectors of the community, small sites can also make a valuable contribution to accessible local provision. The city is now concentrating on improving the quality of its parks, greenspaces and beaches and is undertaking this via nationally accepted awards which concentrate on a range of environmental but also social and economic factors.

All of Dundee’s green space was identified, categorised and digitised in 2007 and is updated at regular intervals. The green space audit is the basis for review of the provision, quality and function of all green spaces in each of Dundee’s eight Local Community Planning Partnership areas. These are at various stages of completion in each of the LCPP areas and will be supported by reviewing formally designated open space in the Local Development Plan. Other supporting strategies include the Outdoor Access Strategy adopted in 2005, Core Paths Plan in 2009 and Dundee Outdoor Play and Youth Strategy 2009. A lengthy programme of
improvement of all of Dundee’s play areas has recently been completed and a programme of improvements to Trees and Woods in Green Spaces is ongoing.

**IMPROVING OUR PARTNERSHIP AND PERFORMANCE**

**Low Carbon Future**

Dundee has a clear role to play in rising to the challenges climate change will present to the local area. Reducing our greenhouse gas emissions ahead of national targets, adapting to the affects of climate change and re-asserting our low carbon credentials will mark the next phase in our transition to a low carbon future where we will work with our communities and businesses to strengthen our local economy and address climate change.

The challenge is to develop Dundee as an epicentre of green business and a frontrunner in the emerging low carbon economy by using the city’s knowledge base, existing assets and low carbon infrastructure as a catalyst for development, inward investment, business growth, energy security and new jobs.

The Partnership is committed to transforming Dundee into a low carbon city. The best way to do this is through working together as organisations supported by effective community involvement. A multi-agency Low Carbon Strategy for Dundee will be developed which will...
play a significant part in this transition. The Strategy is to be produced during a time of unprecedented economic challenge and environmental policy change and therefore focuses on ensuring Dundee is best placed to make the most of sustainability opportunities as they develop over the next five years and beyond. It will therefore identify opportunities and funding to link into the emerging renewables market in the city and continue to develop strategic environmental initiatives in the city.

As across all Partnership Outcomes, attracting funding for these initiatives will be challenging especially in the current financial climate. It is anticipated that the strategy will be focussed on a small number of high level strategic outputs and linked into a number of other programmes in the city, particularly those that are of a climate change / renewable energy nature. Whilst being high level in nature, the emerging strategy will seek to engage Dundee’s communities and promote ownership by partners. Achieving a balance for this will also be challenging as there may be a tendency for the strategy to become 'all things to all', thus losing its focus. However, achieving ownership by partners is crucial to the success of the strategic actions. Evidence of change towards a more sustainable city will be integral to achieving the strategy. Ideas on how to collate this type of evidence are currently being developed. It is anticipated that it will form part of any possible funding packages submitted.

One of the first actions will be to develop a ‘Mini’ Stern Review for Dundee that will have a clear focus on assessing the economic benefits from the low carbon agenda for Dundee including employment opportunities, job creation and skills development. The review will assess the range of low carbon options available to Dundee, the scope for their deployment, the carbon savings and financial returns and the implications for the local economy as well as identifying where Dundee could collaborate with other cities where there may be economies of scale.

**Zero Waste Plan**

Dundee City Council is highly regarded in the field of waste management, however in order to comply with the measures laid out in the Zero Waste Plan, existing systems and facilities will be expanded upon and new ones adopted.

Integral to the future of municipal waste management in the city will be the continued utilisation of DERL, the existing Waste-To-Energy plant at Baldovie. The plant uses latest technology to generate electricity from the incineration of waste that can be fed back into the national grid.

Added to this over the next 20 years residents of Dundee can expect:

- Existing blue bin collections (waste paper and cardboard), brown bin collections (garden waste) and green box collections (plastics, aluminium cans, mixed glass) to be expanded further across the city;
- The number of community recycling points in the city to be increased;
- Recycling centres to be refurbished and able to accept a wider variety of materials for recycling; and
- Publicity and awareness raising campaigns

Dundee City Council is an active partner of the East of Scotland Zero Waste Group and will continue to contribute to the production of a Tayside strategy for the prevention of household waste.
Sustainable Travel

The Dundee Partnership will continue to support a pattern of development which seeks to reduce the need to travel, facilitates travel by public transport and freight movement by rail or water, and provides safe and convenient opportunities for walking and cycling. In addition, the link between transport and improving air quality will be developed through the Council’s Air Quality Action Plan. The Government’s Low Carbon Economic Strategy for Scotland (2010) recognises that low carbon transport options such as car clubs, public transport, walking and cycling can bring financial, health and environmental benefits to businesses and households. Green infrastructure is an important element of a low carbon society and as a means of creating sustainable places.
APPENDIX 1:

Ward Level Analysis of SIMD 2012

This paper presents a break down of the Scottish Index of Multiple Deprivation (SIMD) 2012 results by ward.

Each data zone is assigned to one ward. Where a data zone is split across wards, the data zone is assigned to the ward in which most of its residential properties lie.

For each data zone, the number of domains where that data zone falls within Scotland’s 15% most deprived for that domain is counted. This data is provided in tabular and map form. The geographic access domain was not included, as this is not generally considered an issue in Dundee.

The overall rank of each data zone together with its Vigintile rank is also provided. Those data zones falling within Scotland’s 15% overall most deprived data zones are mapped.

1. **Coldside Ward** ................................................................................................................ 103
2. **East End Ward** .............................................................................................................. 106
3. **Lochee Ward** ..................................................................................................................... 109
4. **Maryfield Ward** .................................................................................................................. 112
5. **North East Ward** ............................................................................................................. 115
6. **Strathmartine Ward** .......................................................................................................... 118
7. **The Ferry Ward** ................................................................................................................ 121
8. **West End Ward** .............................................................................................................. 123
